Junior Developer

UX/UI Design | Full-Stack Developer | Machine Learning

Summary of Qualifications

- **Junior Full Stack Developer** adept at building scalable, maintainable web applications using ReactJS and NodeJS, with a commitment to high-quality code and modern development standards.
- **Technical Proficiency** in modern stacks (React, Node, Java) and cloud-based architecture, with a focus on writing clean, well-documented code.
- **QA & CI/CD Expertise** experienced in the full software development lifecycle, including unit testing, debugging, and maintaining CI/CD pipelines to ensure seamless deployment.
- **Collaborative Problem-Solver** skilled in Agile methodologies, code reviews, and cross-functional team communication to deliver robust software solutions.

Academic Projects

Software Engineering Technology - Artificial Intelligence - Advanced Diploma

Web Design

- **Bento Grid Design (Individual Project) - Deployed Website**
    - **Software and Tools:** HTML, CSS Animations, RxJS, RESTful APIs, JavaScript | React | GitHub, Render | Photoshop
    - Enhance CSS skill further by playing with a cursor to make the website more attractive and user-friendly design. Users can hover over any element, including text titles, to experience interactive CSS effects. This website also serves as a portfolio.
- **Nutrition Application (Group of 5) - Deployed Website**
    - **Software and Tools:** HTML, CSS, RxJS, RESTful APIs, JavaScript | React, Node, Express | GitHub, MongoDB Compass, Render | Photoshop | JSON
    - This website provides a feature for collecting Nutrition by filling in information or uploading a barcode image to retrieve the data from the backend. This also provides an AI-generated tool to generate calories and store them under a unique ID. All features were tied to user authentication; users without a user ID had to create one and log in first, with tokens used for verification.

Mobile App Design

- **Clinic Application (Individual Project) - Browser Link**
    - **Software and Tools:** Figma, UI/UX | Photoshop

This is a Clinic Mobile App design that mainly focuses on displaying the process of appointment and arrangement, matching the patient with available doctor schedules. This also provides additional features design such as AI Chatbot, Prescription, Prescription handling, medical news, and department navigation.

JATURAPUT (MAC) JONGSUBCHAROEN

992 Woodbine Ave, Apt 2

LinkedIn | GitHub | YouTube | Portfolio

Junior Developer

UX/UI Design | Full-Stack Developer | Machine Learning

Data Analysis & Machine Learning

- **KiddoLand - Child-Safe AI Content Platform (Group Project) - Deployed Website**
    - **Software and Tools:** Python, FastAPI, MongoDB, Hugging Face API,, JavaScript
    - Built a full-stack platform using FastAPI and React, integrating LLMs and Hugging Face safety validation layers to generate personalized, age-adaptive educational content.
- **Chest X-Ray Pneumonia Detection System (Individual Project) - Deployed Website**
    - **Software and Tools:** Python, TensorFlow, Keras, Flask, HTML, CSS, JavaScript | React
    - Engineered a deep learning web application implementing custom CNN and TensorFlow/Keras architectures to automate classification and analysis of chest X-ray medical imaging.

Education

Software Engineering Technology – (AI) Advanced Diploma — Jan. 2024 – Apr. 2026
Centennial College, Toronto, ON, Canada — *GPA: 4.309/4.5*
Course:

AI Foundations	MongoDB and Full-Stack Web Development	Database Concepts (SQL)
C# Programming	Software Requirements engineering	Linux/Unix OS
Java programming	ML: Supervised, Unsupervised, Reinforcement	Software System Design

Bachelor of Architecture (Architecture) - Presentation Link — Aug. 2016 – May 2021
King Mongkut's University of Technology North Bangkok, Bangkok, Thailand — *GPA: 3.39/4.0*
Course:

2D & 3D Design	Rendering & Visual Reality	Graphic Design
SketchUp Software	Photoshop & Illustrator Software	AutoCAD Software

Work History

Web & Motion Graphic Designer (Freelance) - View Project — Sep. 2025 – Oct. 2025
QDM Creative | Toronto, ON | Remote
- Designed UI/UX for learners through an employer-led project via Riipen, collaborating with industry professionals to build visually engaging, multimedia-rich websites by using the WIX platform.

Full-Stack Developer (Part-Time) - View Project — Jan. 2026 – Apr. 2026
FleetZero Inc. | Toronto, ON | Hybrid
- Developed an Angular-based fleet management dashboard integrated with C# .NET backend APIs to display vehicle data, status charts, and drag-and-drop bus management features.

Hackathon Experience

AI Battery Intelligence with Digital Twin - First Place Winner - Deployed Website — Oct. 2025
Fleet Zero Challenge, Centennial College **- Team: NextStop Charge (Group Project)**
- Designed a UI/UX mock-up website demonstrating AI-based early battery degradation detection, handling full-stack integration with mock APIs for real-time data updates.

EMPLOYMENT AGREEMENT
This Agreement is made and entered into this 25th day of _August, 2025
By and Between:

Quashie Digital Media
(Hereinafter referred to as the "Company")
And
[Jaturaput (Mac) Jongsubcharoen], residing in Toronto, ON l +1647 425 9756
(Hereinafter referred to as the "Contractor")

1. Project Scope

The Contractor agrees to provide web development and design services to build a new website for the Company at [www.qdm-creative.ca], using the **WIX platform**.

The scope of work includes:

- Collaborating with the Motion Graphic Designer and Creative Services Director.
- Designing a responsive website for both desktop and mobile browsers.
- Developing sections to showcase creative projects, video, audio, photography, and motion graphics.
- Creating animated transitions and subtle motion effects between sections.
- Ensuring mini-sites (subsections) are accessible from the landing page.
- Integrating video and photographic content provided by the Company.
- Enabling administrative and editorial control for future updates by the Company.

IN WITNESS WHEREOF, the parties have executed this Agreement on the date first above written.

EMPLOYMENT AGREEMENT
This Agreement is made and entered into this 3rd day of September, 2025
By and Between:

Quashie Digital Media
(Hereinafter referred to as the "Company")
And
[Jaturaput (Mac) Jongsubcharoen], residing in Toronto, ON l +1647 425 9756

1. Project Scope

The Designer agrees to provide creative services to develop a **Motion Graphics Brand Portfolio** for Quashie Digital Media, with deliverables for both digital and print formats. The project scope includes:

- Designing three (3) **original brand concepts** for review and selection.
- Developing **animated logo treatments**, **font styling**, and **typography** tailored for both print and web applications.
- Considering **color schemes**, **transitions**, **animations**, and **legibility** in both media formats.
- Designing print materials, including:
  - Letterhead
  - Two-sided business cards
- Creating finalized branding assets in both print-ready and digital formats.

9. Governing Law and Equal Opportunity

This Agreement shall be governed by the laws of the **Province of Ontario**, and the applicable laws of Canada. Any disputes shall be resolved in Ontario courts.

Quashie Digital Media is committed to **equal opportunity employment and contracting**. The Company does not discriminate based on race, gender, sexual orientation, age, disability, or any other protected characteristic. All qualified candidates will be considered fairly and equitably. The Designer agrees to uphold these principles in all interactions.

10. Entire Agreement

This document constitutes the full understanding between the parties. No other agreements or understandings, oral or written, shall be valid unless made in writing and signed by both parties.

IN WITNESS WHEREOF, the parties have executed this Agreement as of the date first written above.

Samples of Work

Bento Grid Design (Individual Project) - [Deployed Website]

Tools Used: HTML, CSS Animations, JavaScript, React, RxJS, RESTful APIs, GitHub, Render, Adobe Photoshop

Project Overview
This project is a fully deployed interactive portfolio website designed by using a Bento Grid layout. The primary goal was to show my CSS animation skills while creating a visually engaging and user-centered portfolio interface.
The website combines dynamic UI interactions with API-driven project data in order to allow users to explore academic projects in an interactive and structured layout.

Background & Purpose
Traditional portfolio websites are technically static and visually predictable. This project was designed to:

- Experiment with advanced CSS animations, especially interactive typography
- Create a modern Bento Grid layout to organize all functions in a consistent pattern
- fetch the project data Dynamically from a backend API
- Display GitHub frontend and backend repositories conditionally

The goal was to build a portfolio website that is both technically functional and representative of a personal design style.

Interactive UI & Typography Design

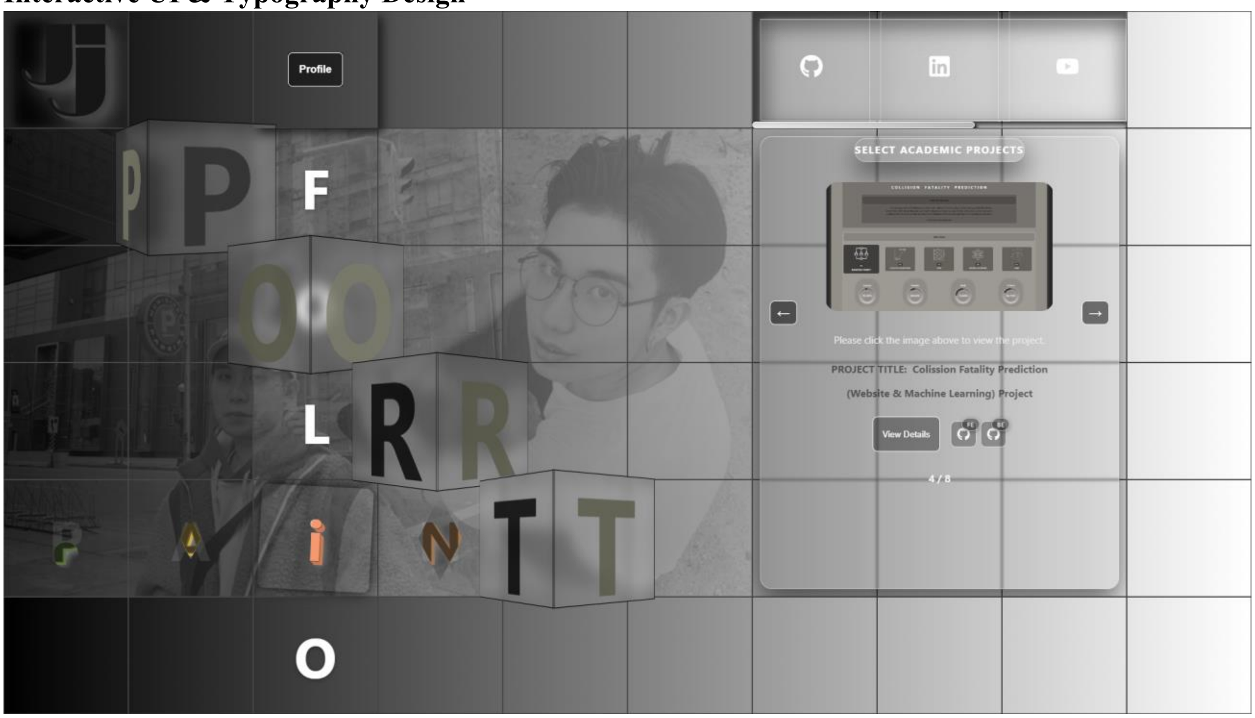

Figure 1: Interactive Bento Grid homepage featuring animated typography and hover-based motion effects.

This section demonstrates that the animated homepage layout where users can interact with typography and visual elements. Key interactive features include:

- The word **“PAINT”** changes color dynamically whenever it is hovered
- Individual letters (such as “I”) respond independently to cursor interaction
- The word **“PORT”** rotates automatically to the right and rotates in the opposite direction when hovered
- Hover-based grid animations enhance user engagement

API Integration & Dynamic Project Display

Figure 2: Dynamic project detail panel retrieving data from a backend RESTful API and displaying GitHub repository icons.

This section demonstrates how the website retrieves project information dynamically from a backend API rather than hardcoding content. When a user selects a project, the frontend fetches:

- Project title
- Duration and work type
- Project description
- Frontend and backend GitHub links are displayed depending on whether the project has a frontend or backend.

GitHub icons are rendered conditionally based on API response data. The website is deployed by using Render and managed with GitHub version control.

<u>AI Battery Intelligence with Digital Twin | First Place Winner</u> - <u>Deployed Website</u>
Fleet Zero Innovation Transportation Jam – Centennial College (Oct. 2025)
Team: NextStop Charge (Group Project)
Tools Used: HTML, CSS, Angular, Node.js (Mock APIs)

Project Overview
This project was developed during the Fleet Zero Innovation Transportation Jam where our team designed a Digital Twin–based battery intelligence system for electric bus fleets. The goal was to demonstrate how AI-driven monitoring could detect early battery degradation, supporting predictive maintenance decisions. The project was deployed as a functional mock-up website to integrate frontend dashboards with simulated backend data through mock APIs.

Background & Purpose
Electric bus fleets require continuous monitoring, so this solution can be used to prevent unexpected battery failure in the future and reduce operational downtime. This mock-up dashboard was designed to:

- Detect early battery degradation by using AI-based health scoring
- Provide real-time battery monitoring dashboards
- Offer predictive performance insights
- Support fleet-level sustainability tracking

The goal was to have visualization to improve maintenance planning efficiently.

Fleet Operator Dashboard

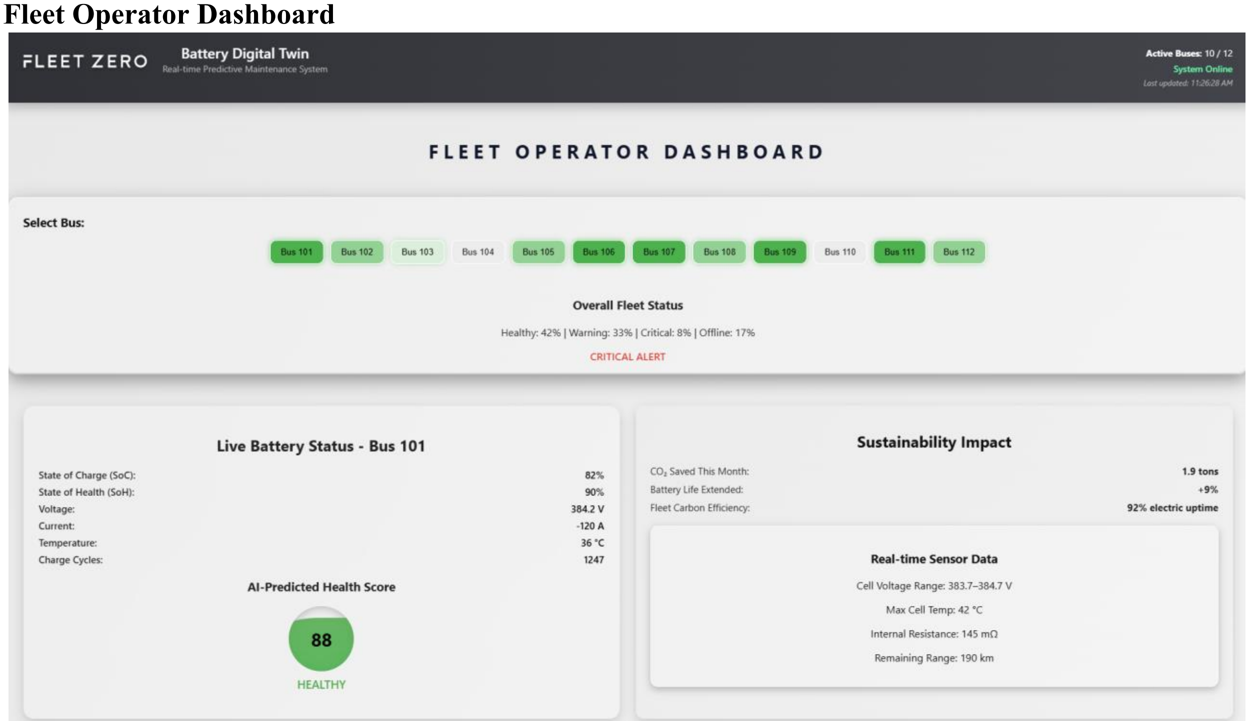

Figure 3: Fleet Operator Dashboard displaying fleet-wide battery health status and predictive performance insights.

This dashboard was designed for fleet managers to quickly monitor multiple buses virtually in real time by including:

- Bus selection panel
- Live battery metrics (SoC, SoH, voltage, temperature)
- AI-predicted health score
- Fleet-wide status summary
- Sustainability metrics and performance prediction chart

Driver Vehicle Monitor Interface

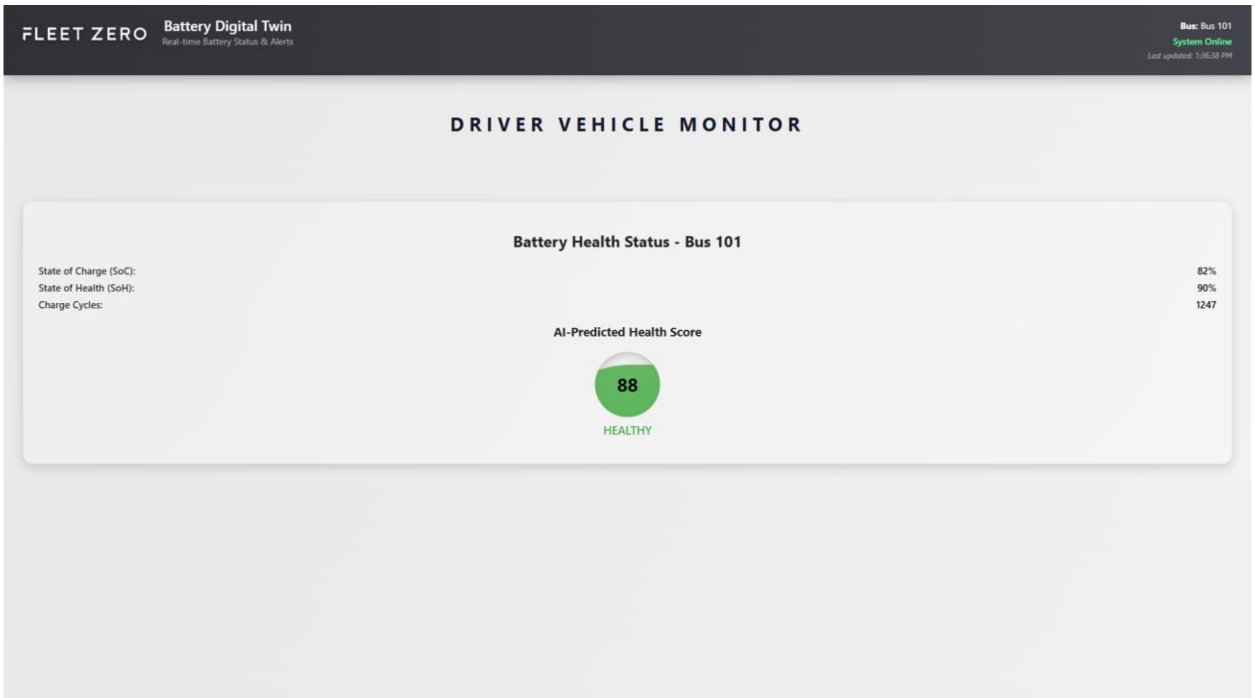

Figure 4: Driver-facing vehicle monitor interface for real-time battery and system monitoring inside the bus.

This interface was designed for drivers to monitor battery health during operation, focusing on clear and essential information, so this will display, real-time battery indicators, Health status visualization, and system alerts. Unlike the operator dashboard, this interface prioritizes simplicity and minimalism to reduce cognitive load while driving.

FleetPulse Vehicle Management Dashboard - View Project

Role: Full-Stack Developer (Part-Time)
Jan. 2026 – Apr. 2026 | FleetZero Inc. | Toronto, ON | Hybrid
Tools Used: Angular, TypeScript, C# .NET, REST API, Chart.js

Project Overview

This project involves the development of a fleet management dashboard to monitor and manipulate buses status across multiple facilities. The system provides operational insights through real-time vehicle status tracking, facility information, and interactive data visualizations.

Background & Purpose

Transit operators require centralized tools to track vehicle status, maintenance conditions, and facility distribution. This dashboard was designed to:

- Monitor fleet status across multiple facilities
- Visualize operational data through charts and metrics
- manipulate vehicle states to display the status of storage, in-service, out of service, maintenance, long-term maintenance, and off-site maintenance for each bus number.
- Improve operational visibility for fleet managers

The goal was to provide a clear operational overview to support more efficient fleet monitoring and maintenance planning.

Fleet Facility Overview Dashboard

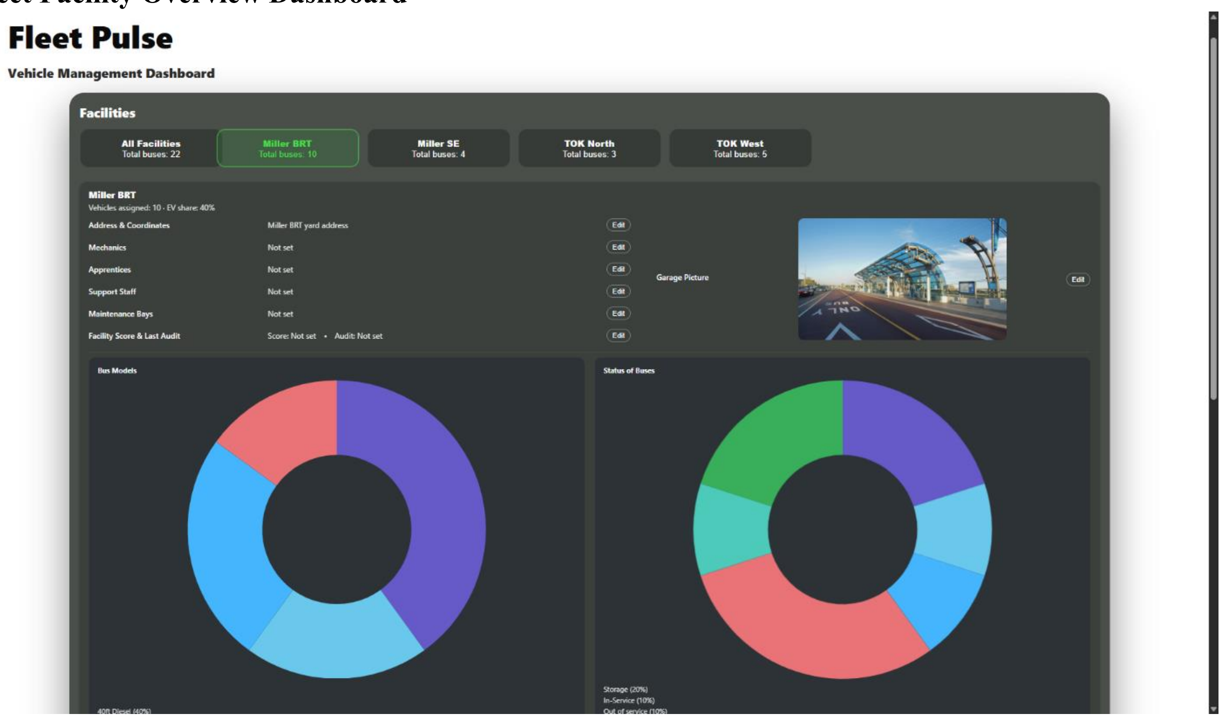

Figure 5: Fleet facility overview displaying bus distribution and operational status charts.

This interface provides a summary of facility information and vehicle distribution across multiple locations. It includes facility selection panels, operational statistics, and data visualization charts, enhancing managers' performance of to quickly understand fleet conditions.

Vehicle Status Management Interface

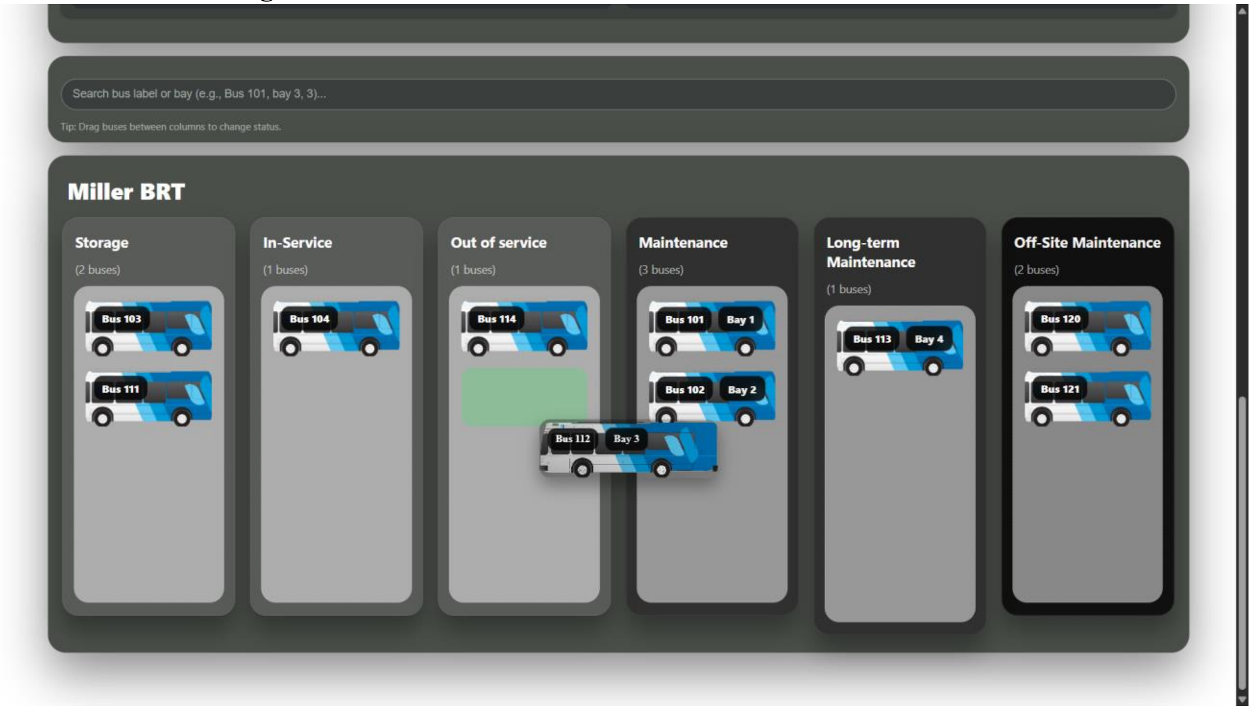

Figure 6: Drag-and-drop vehicle management system showing bus status categories.

This interface allows fleet operators to manage bus statuses by using a drag-and-drop function to easily move buses between status. Vehicles can be moved between operational states such as storage, in-service, maintenance, or off-site maintenance.

Key interface components include:

- Bus status categorization panels
- Drag-and-drop vehicle management
- Real-time operational state updates
- Search functionality for quick vehicle lookup

<u>Collision Fatality Prediction (Individual Project)</u> - [Deployed Website]
Tools Used: HTML, CSS, JavaScript, React, Python, Flask, REST API, Render
Libraries: scikit-learn, imbalanced-learn (SMOTE), NumPy, Pandas, Matplotlib, Seaborn, Joblib

Project Overview
This project analyzes traffic collision data from Toronto and predicts whether a collision is likely to result in a **fatal or non-fatal outcome** using multiple machines learning models, allowing users to select a model and view prediction results along with model performance metrics.

Background & Purpose
Traffic collision data contains complex relationships between road conditions, driver factors, and environmental variables. This project was designed to:

- Build machine learning models to predict fatal collision outcomes
- Compare performance through multiple algorithms
- Provide an interactive web interface to visualize prediction results
- Demonstrate applied data analysis and machine learning deployment

The goal was to analyze traffic collision patterns and use predictive modeling to better understand factors associated with fatal accidents.

Machine Learning Model Selection Interface

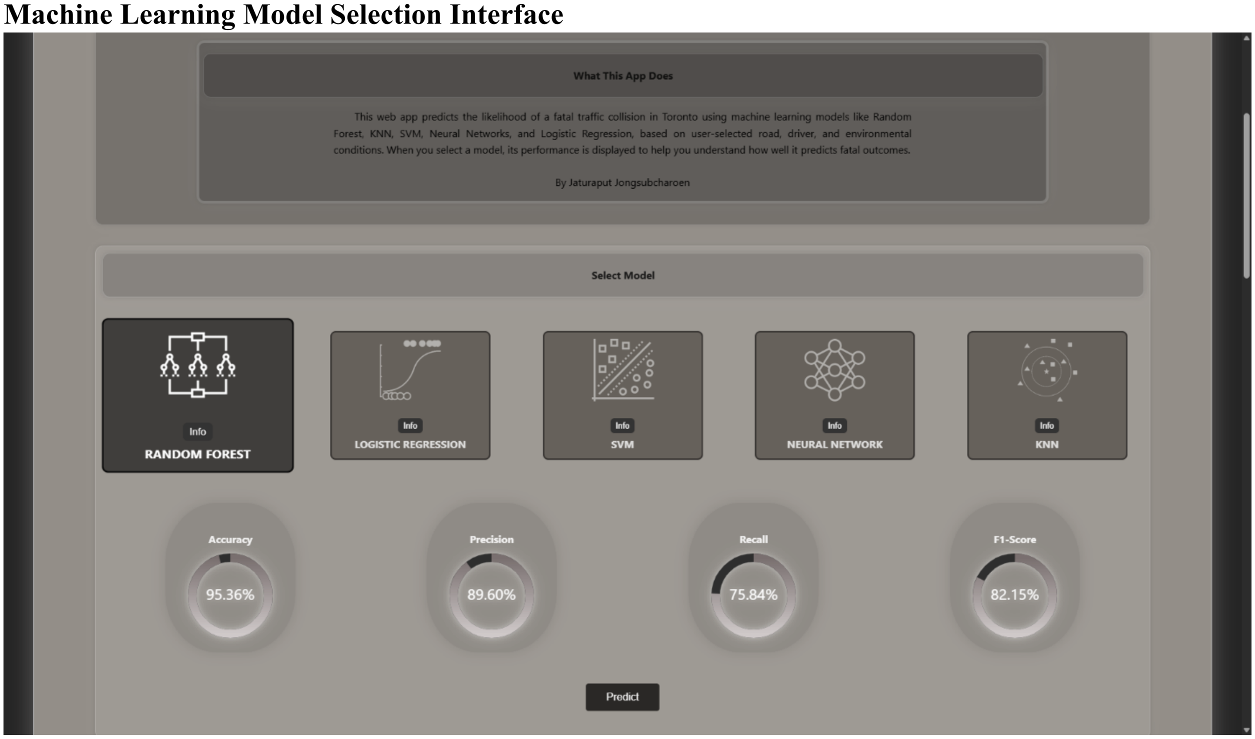

Figure 7: Model selection dashboard displaying available machine learning algorithms and evaluation metrics.

The interface allows users to choose between several trained models including **Random Forest, Logistic Regression, Support Vector Machine (SVM), Neural Network, and K-Nearest Neighbors (KNN)**, showing the performance indicators such as **accuracy, precision, recall, and F1-score** are displayed to help compare model effectiveness.

Prediction Result Interface

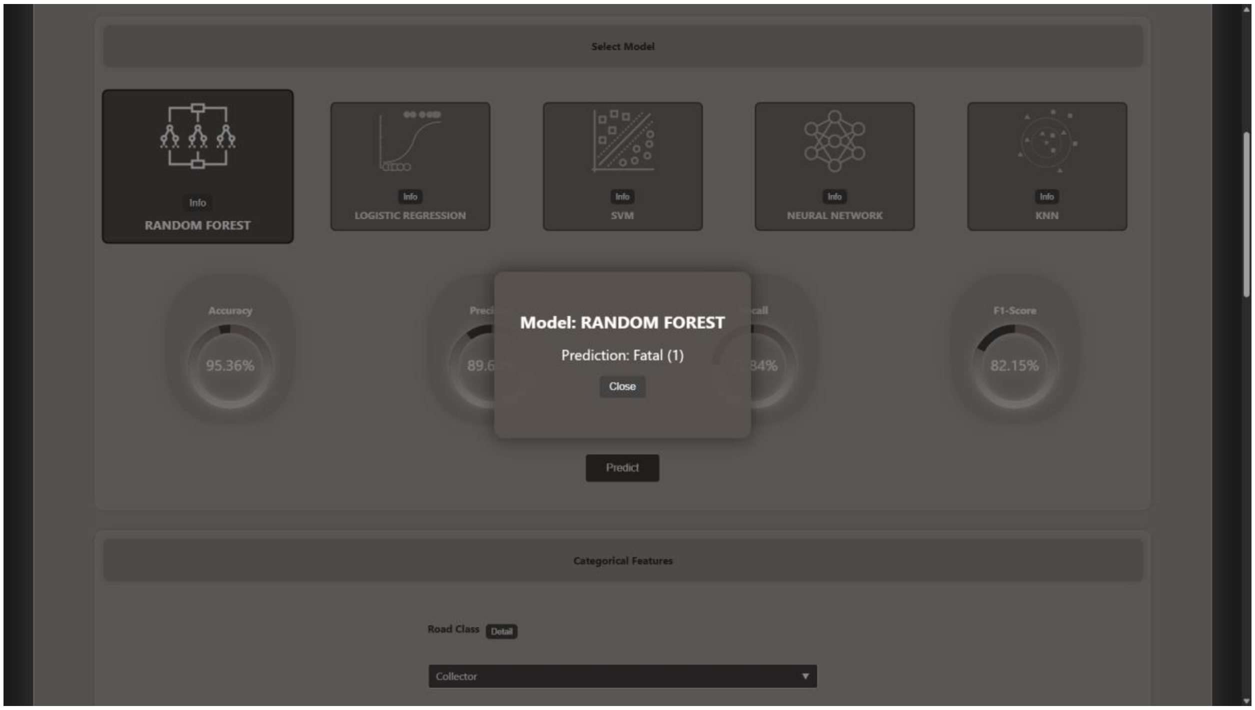

Figure 8: Prediction output displaying the selected model and predicted collision outcome.

Users can input road and environmental conditions to generate predictions. The system processes the inputs through the trained machine learning pipeline with the categorical and numerical features in order to predict the outcome as Fatal or Non-Fatal through the web interface.

<u>Chest X-Ray Pneumonia Detection System (Individual Project)</u> - [Deployed Website]
Tools Used: Python, TensorFlow, Keras, Flask, HTML, CSS, JavaScript, React, Render
Libraries: TensorFlow, Keras, NumPy, Pandas, Matplotlib, scikit-learn, OpenCV, Joblib

Project Overview
This project focuses on detecting pneumonia from chest X-ray images using multiple deep learning models. Users can compare model performance, upload images, and receive prediction results through an interactive web application.

Background & Purpose
Medical image diagnosis requires both speed and accuracy. This project was created to:

- Build deep learning models for pneumonia classification
- Compare CNN and transfer learning approaches
- Provide an interactive image prediction interface
- Demonstrate AI applications in healthcare diagnostics

The goal was to explore how AI can support faster and more accurate pneumonia screening.

Deep Learning Model Selection Interface

Figure 9: Model Selection and Performance Dashboard.

This interface allows users to compare trained models such as Baseline CNN, Deep CNN, Wide CNN, Autoencoder Transfer, ResNet50 Transfer, and ResNet50 From-Scratch. Accuracy, Precision, Recall, and F1-Score are displayed for evaluation.

Prediction Result Interface

Figure 10: Chest X-Ray Prediction Interface.

Users can upload X-ray images or test sample images. The selected model predicts whether the image is Normal or Pneumonia and displays confidence scores.

Key design considerations included:

- Multiple model comparison dashboard
- Image upload and prediction system
- Real-time metric visualization
- Healthcare AI deployment demo

KiddoLand – Child-Safe AI Content Platform (Group Project) - Deployed Website
Tools Used: Python, FastAPI, MongoDB, Hugging Face API, HTML, CSS, JavaScript, React, Render
Libraries: Transformers, sentence-transformers, gTTS, NumPy, Pydantic, HTTPX

Project Overview
This project focuses on generating personalized, child-safe stories, rhymes, and quizzes using large language models (LLMs). Users can interact with the system through an intuitive web interface to create educational content based on custom inputs.

Background & Purpose
Educational content generation requires both creativity and safety. This project was created to:
• Build an AI-powered content generation system using LLMs
• Provide interactive features such as story, rhyme, and quiz generation
• Implement safety filtering before and after AI responses
• Support age-adaptive content for different learning levels
The goal was to demonstrate how AI can be applied in education while ensuring safe and meaningful user experiences.

Main Dashboard & Feature Selection Interface

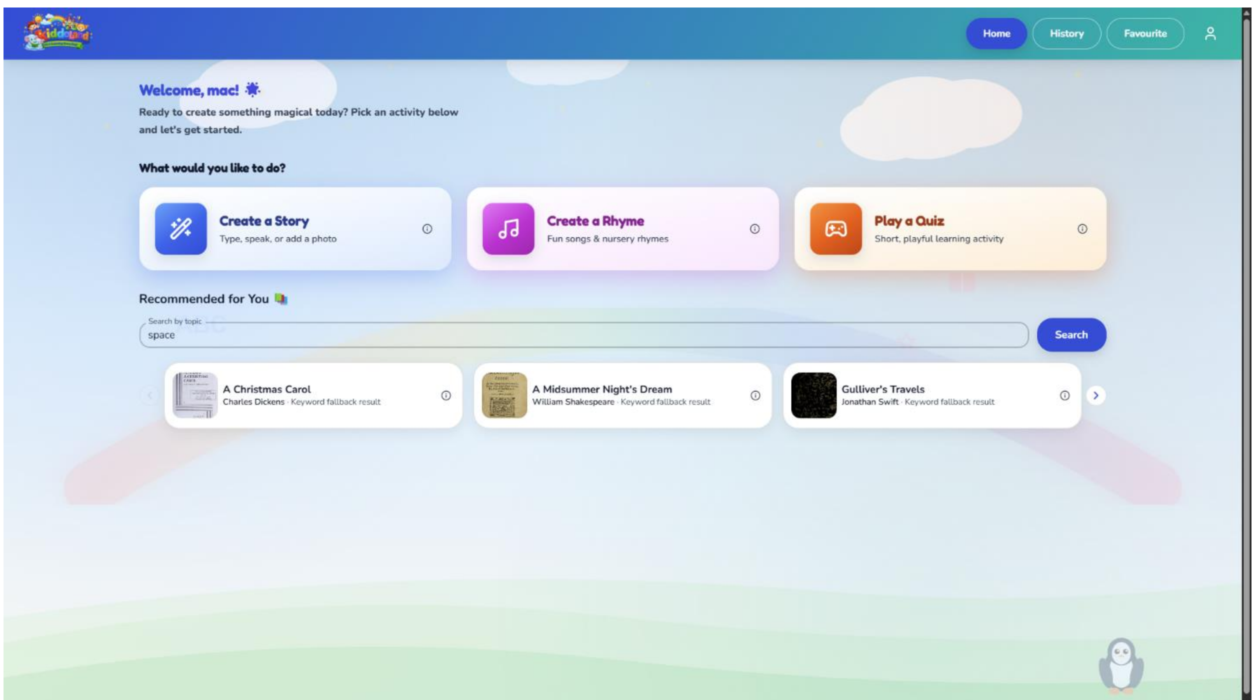

Figure 11: KiddoLand main dashboard showing story, rhyme, and quiz generation features.

This interface allows users to select different AI-powered features including story creation, rhyme generation, and interactive quizzes. The dashboard also provides personalized recommendations and navigation options such as history and favorites.

Create Story Generation Interface

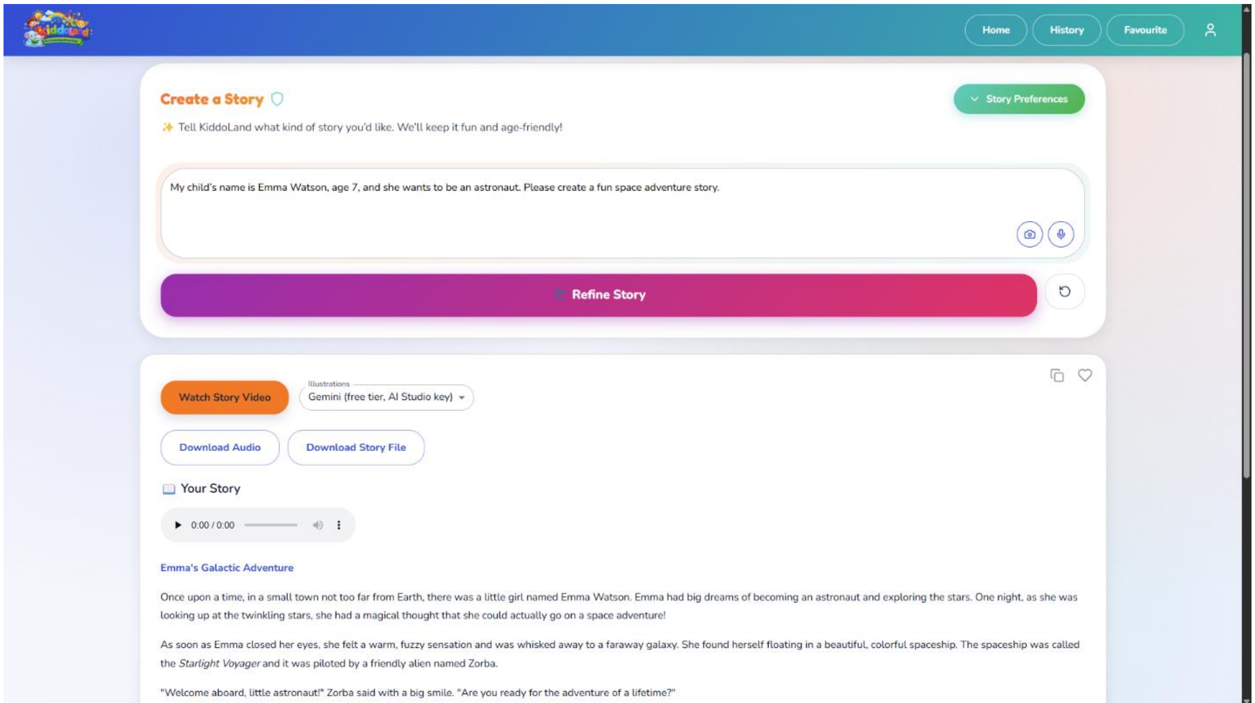

Figure 12: Story generation interface with prompt input and AI-generated content output.

Users can input prompts using text, voice, or image-based input to generate personalized stories. The system processes user input through LLMs and returns structured, age-appropriate content along with additional features such as audio playback and downloadable results.

Web & Motion Graphic Designer - **View Project**
Role: Web & Motion Graphic Designer (Freelance)
Sep. 2025 – Oct. 2025 | QDM-Creative | Toronto, ON | Remote
Tools Used: WIX, HTML/CSS (WIX Editor), Photoshop, Adobe After Effects

Project Overview
This project was completed through an employer-led collaboration via Riipen, where I contributed both branding and website design for QDM Creative. The goal was to develop a visually unique brand identity, providing a responsive multimedia website to show how creative digital services are.

Background & Purpose
The objective of this project was to:

- build a professional brand identity
- Develop a responsive multimedia website
- Ensure intuitive navigation to structured content hierarchy
- Deliver a visually engaging user experience

The website was deployed and optimized for both desktop and mobile viewing.

Role 1: Motion Graphics Designer

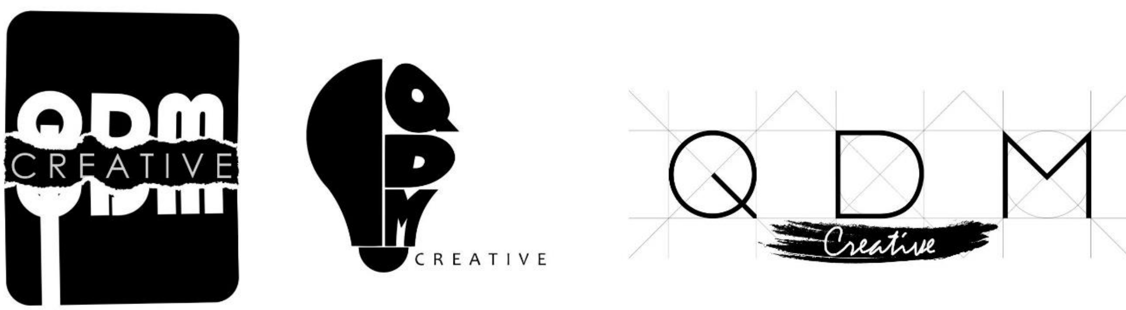

Figure 13: QDM Creative logo design and branding elements.

As the Motion Graphics Designer, I developed the QDM logo concept and visual identity. The design is to point out minimalism, geometric balance, and clean typography to reflect modern digital creativity.

Role 2: Website Designer

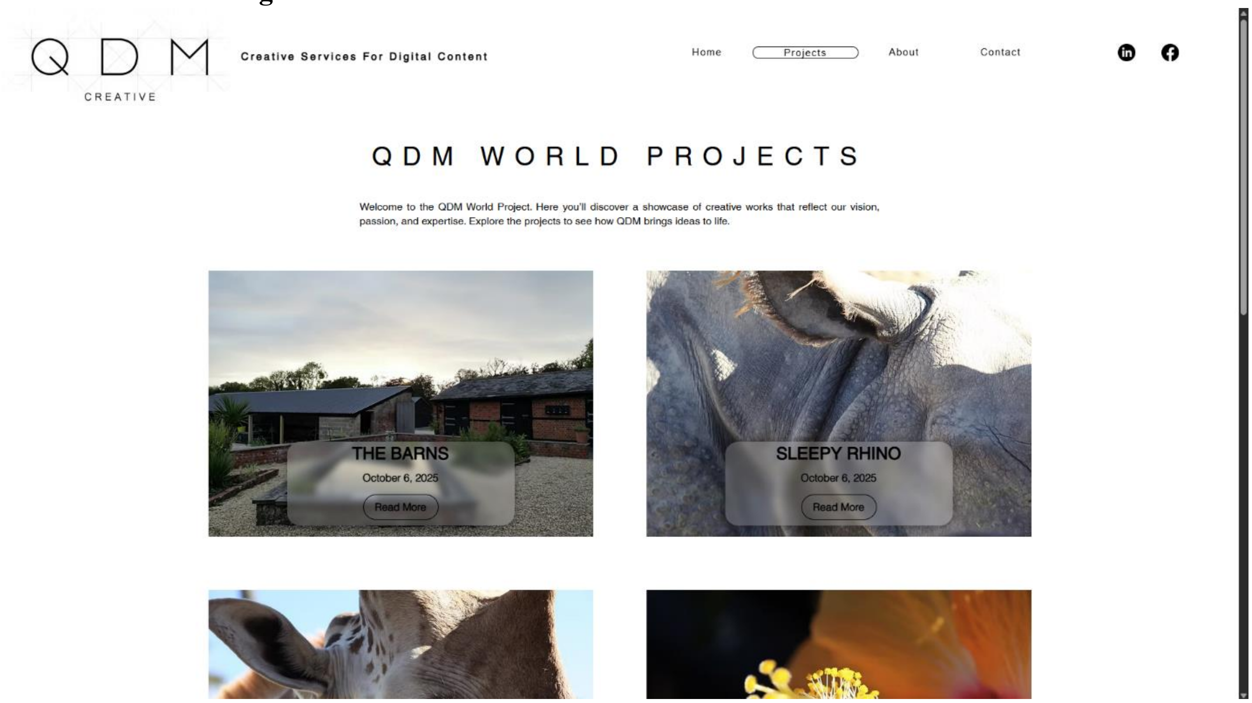

Figure 14: QDM Creative website homepage and project showcase pages.

As the Website Designer, I structured the site by using a clear parent to child content hierarchy, so this will allow users to access projects through multiple navigation paths

Key design considerations included:

- Responsive layout for different screen sizes
- Multimedia integration (images, galleries, animations)
- Clear navigation structure
- Organized project showcase system
