

AI Capstone Project - Final Individual Contribution Report

Name: Jaturaput Jongsubcharoen

Student ID: 301391425

Course: COMP385 - AI Capstone Project

Section: 001

Instructor: Dr. Vinay Vaithilingam

Project: KiddoLand

Role: Full-Stack Developer (Frontend, Backend, AI Integration)

1. Task Ownership & Deliverables

My Assigned Responsibilities

- Frontend UI development for authentication and story features
- Backend API development for login, story, rhyme, and TTS services
- Authentication system implementation (Parent Mode / Institution Mode)
- AI feature integration using Hugging Face APIs
- Bug fixing, testing, and feature validation
- Documentation support and PR reporting
- Frontend-backend API connection and data flow handling
- Database integration using MongoDB for saved stories and favorites

Deliverables Completed

- Authentication forms connected to backend APIs
- Login and signup integration with token handling
- Shared navigation bar and reusable back button implementation
- Institution Mode authentication flow improvements
- Story Text-to-Speech (TTS) controls added to frontend
- MongoDB story saving and favorites functionality
- Generate Rhyme API development
- Backend TTS support with optional audio response
- Hugging Face AI error handling and response validation
- Deployment support and final testing assistance

2. Version Control Evidence (GitHub)

2.1. GitHub Contribution Evidence

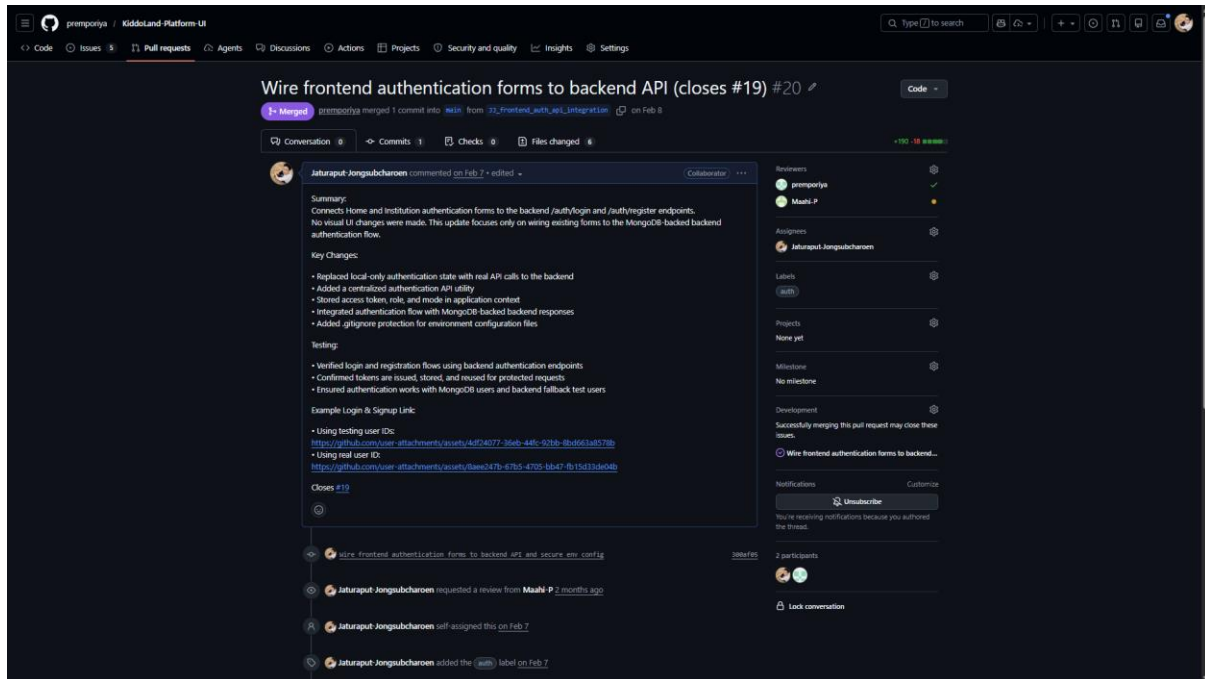

- Total amount of Pull Requests performed: 13
- Frontend Pull Requests: 6
- Backend Pull Requests: 7
- Multiple feature branches created and merged
- Problems in the project that have been solved with the pull request.
- Screenshots-supported repository activity.

2.2. Evidence

2.2.1. Frontend Part (UI)

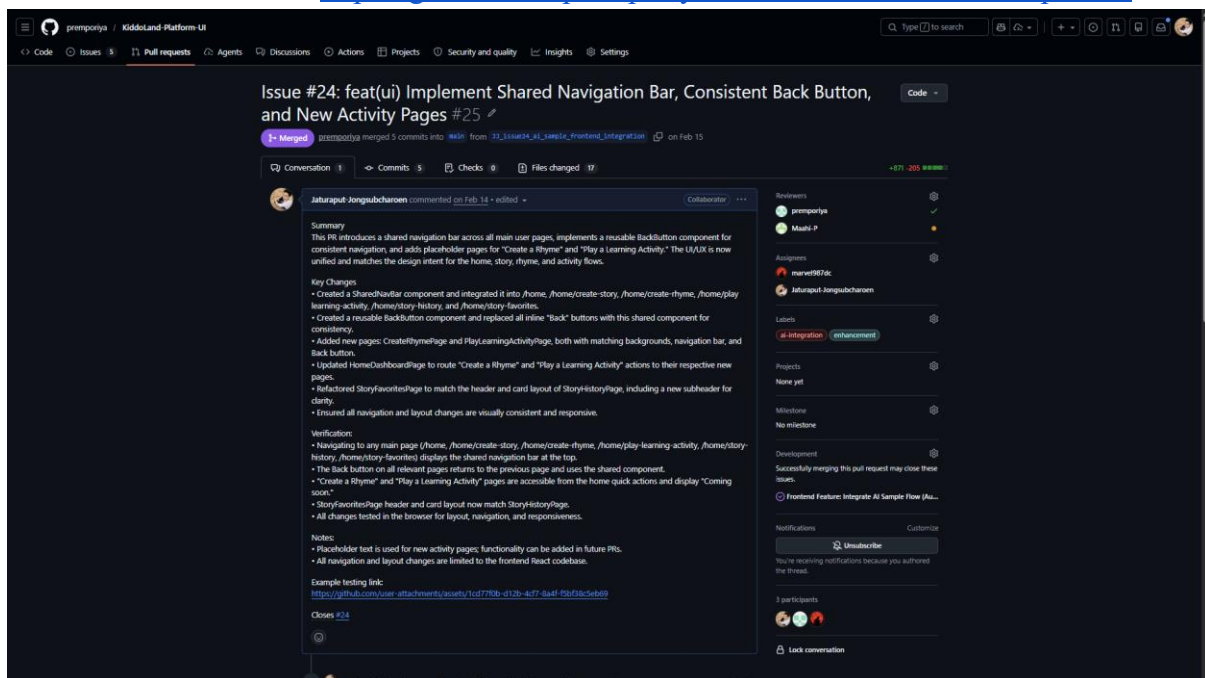

2.2.1.1. Wire frontend authentication forms to backend API (closes #19)

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-UI/pull/20>

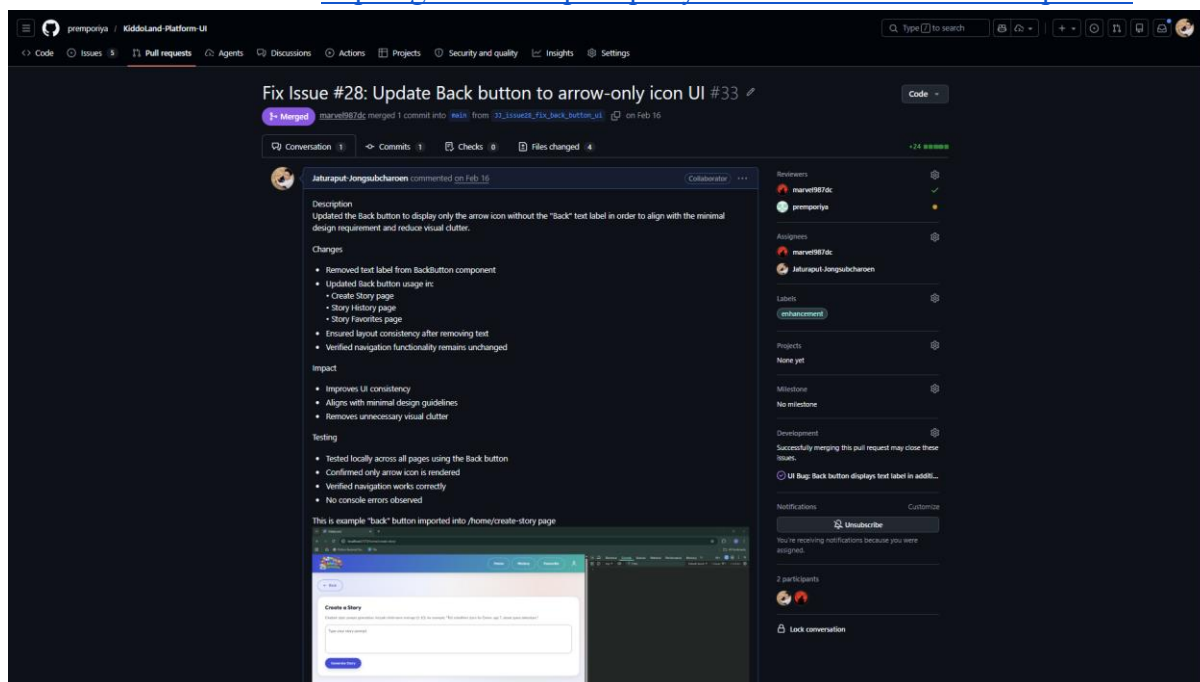

2.2.1.2. Issue #24: feat(ui) Implement Shared Navigation Bar, Consistent Back Button, and New Activity Pages

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-UI/pull/25>

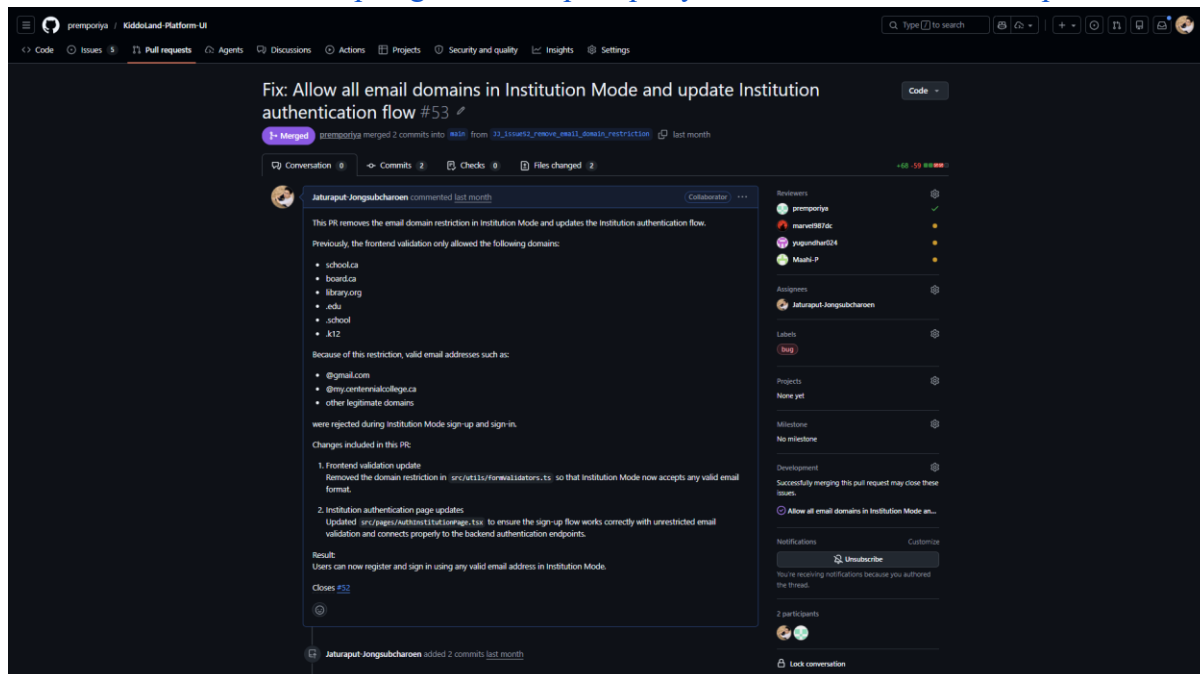

2.2.1.3. Fix Issue #28: Update Back button to arrow-only icon UI

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-UI/pull/33>

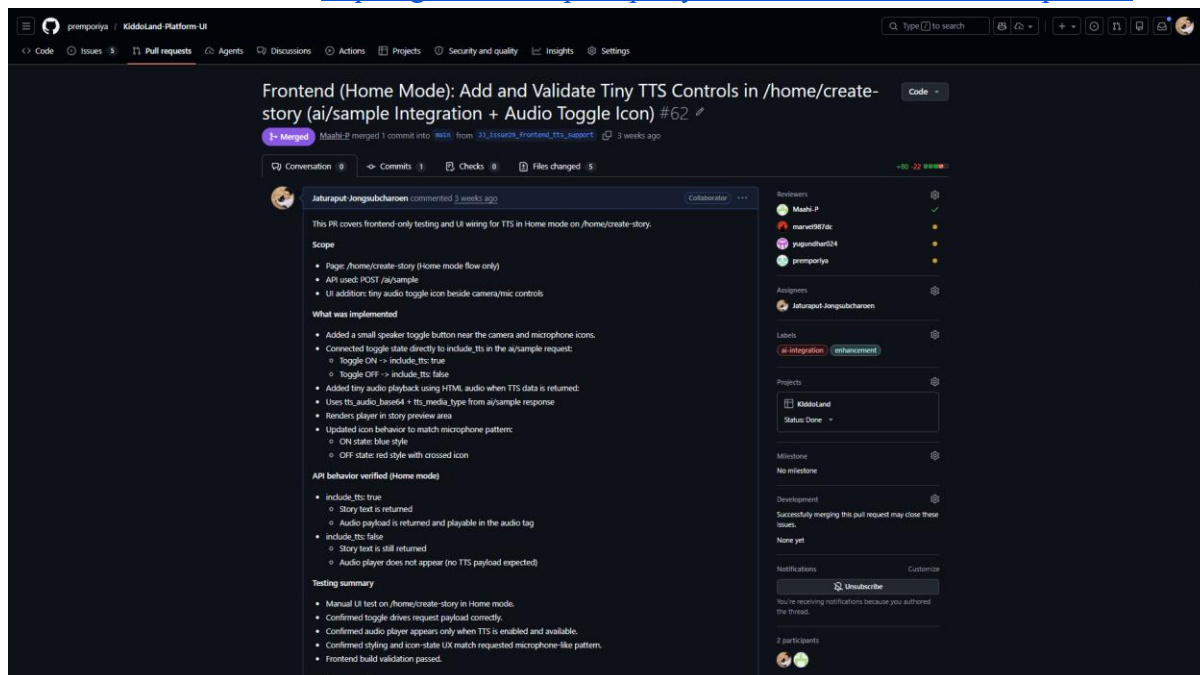

2.2.1.4. Fix: Allow all email domains in Institution Mode and update Institution authentication flow

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-UI/pull/53>

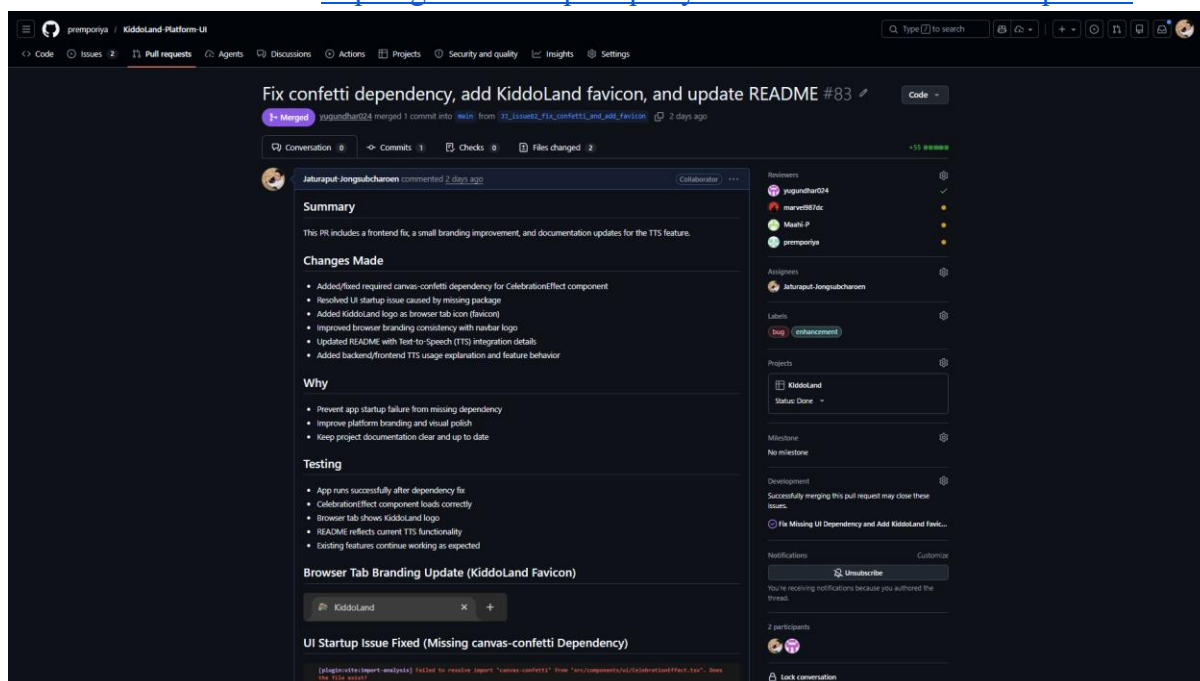

2.2.1.5. Frontend (Home Mode): Add and Validate Tiny TTS Controls in /home/create-story (ai/sample Integration + Audio Toggle Icon)

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-UI/pull/62>

2.2.1.6. Fix confetti dependency, add KiddoLand favicon, and update README

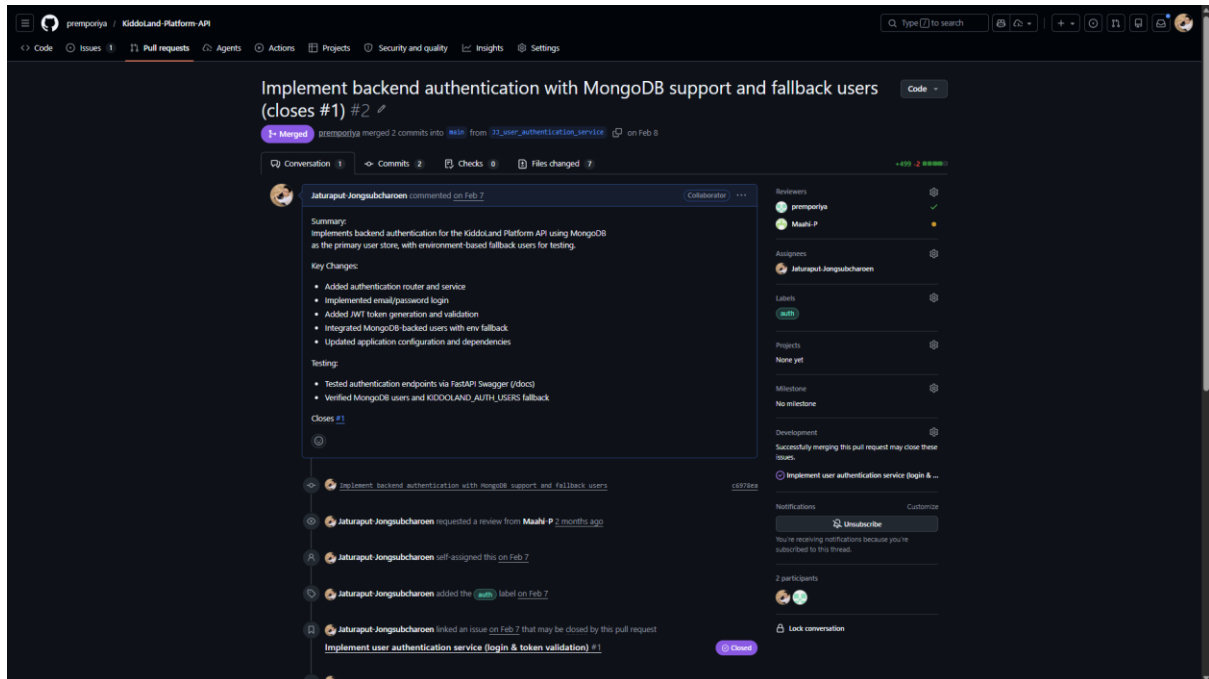

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-UI/pull/83>

2.2.2. Backend Part (API)

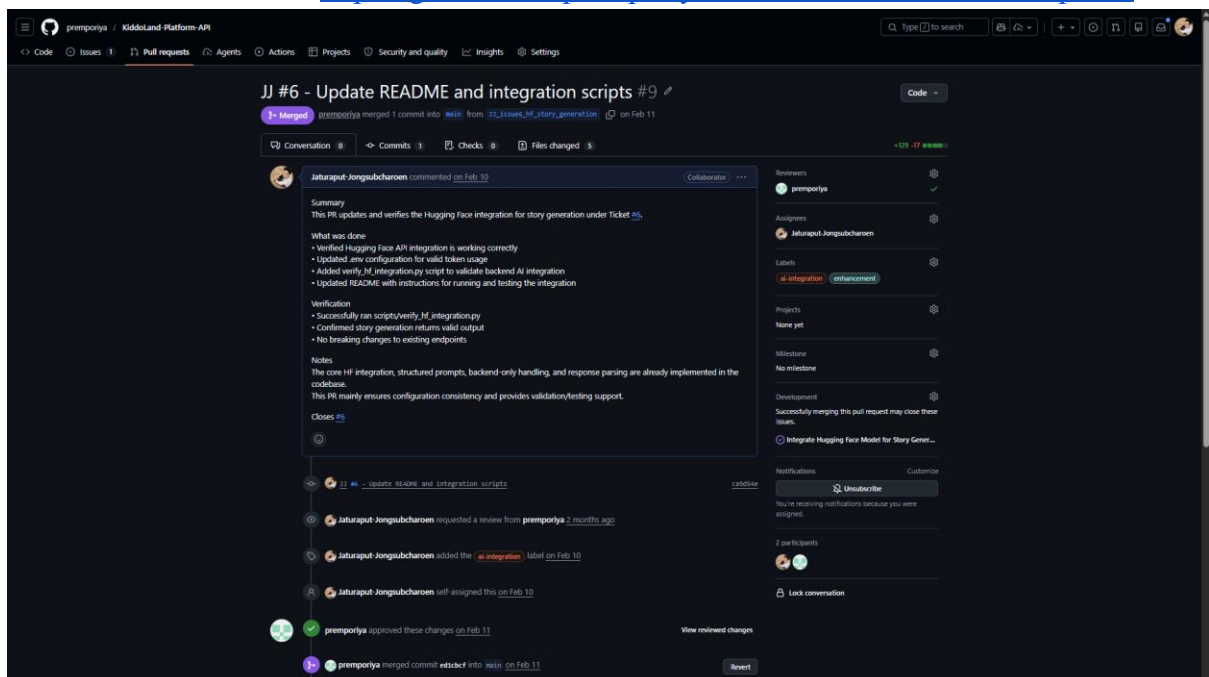

2.2.2.1. Implement backend authentication with MongoDB support and fallback users (closes #1)

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-API/pull/2>

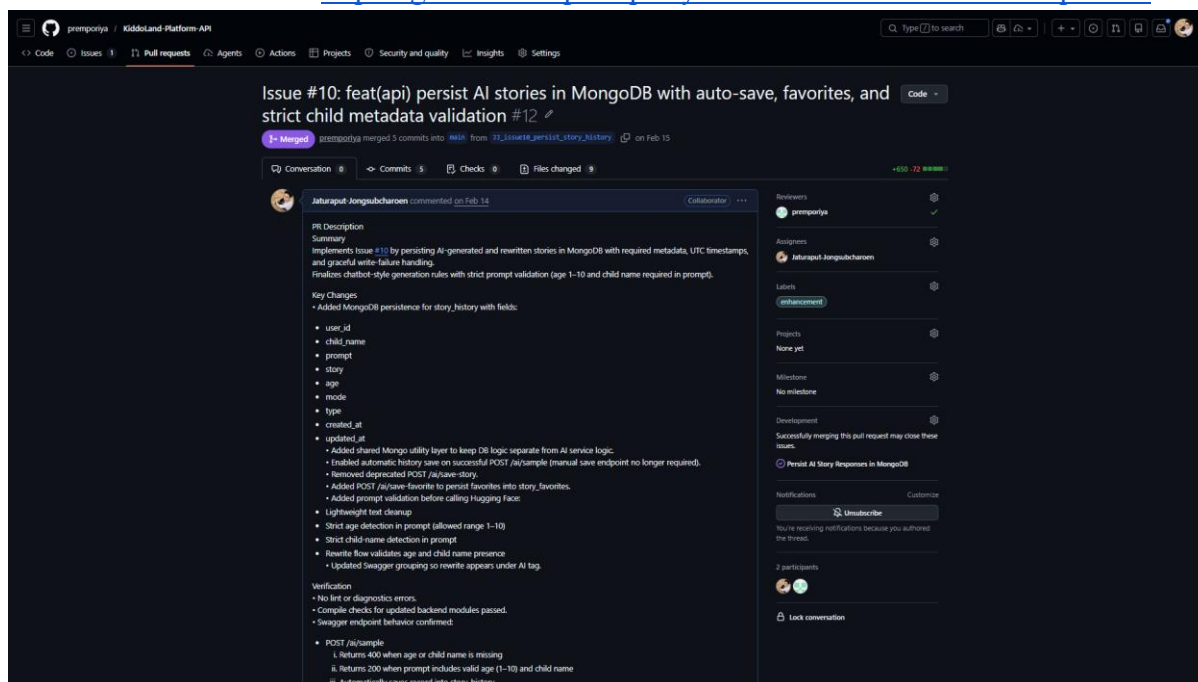

2.2.2.2. JJ #6 - Update README and integration scripts

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-API/pull/9>

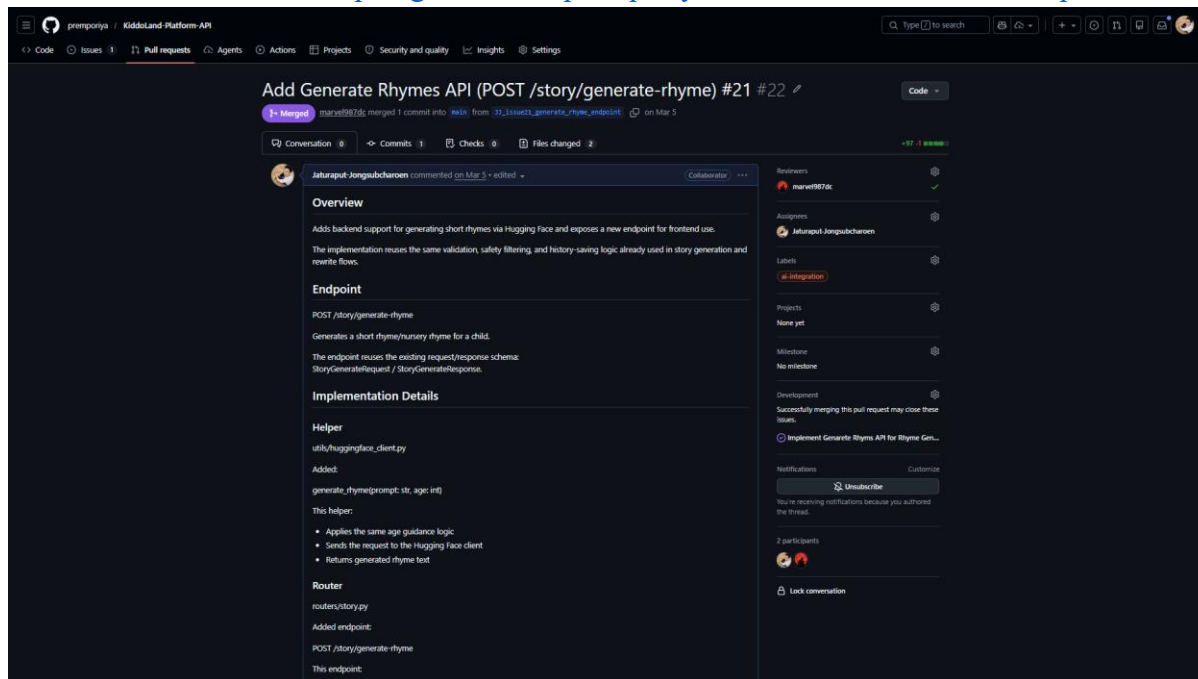

2.3. Issue #7: Add robust Hugging Face error handling, response validation

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-API/pull/11>

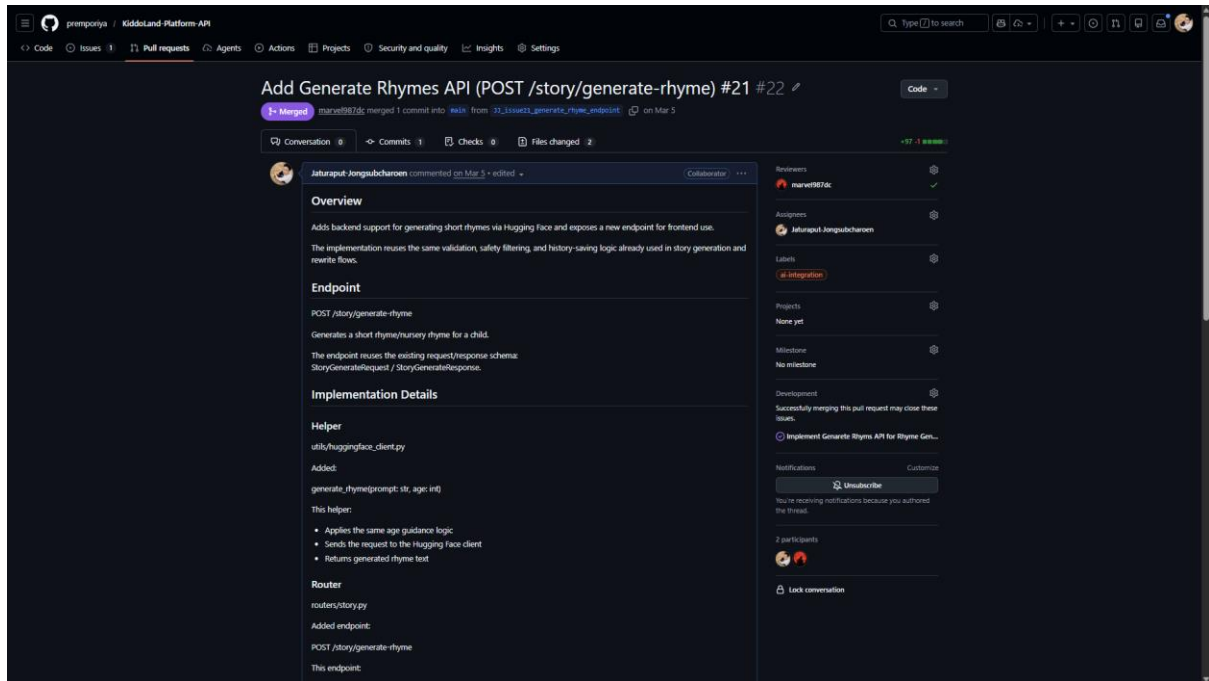

2.2.2.4. Issue #10: feat(api) persist AI stories in MongoDB with auto-save, favorites, and strict child metadata validation

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-API/pull/12>

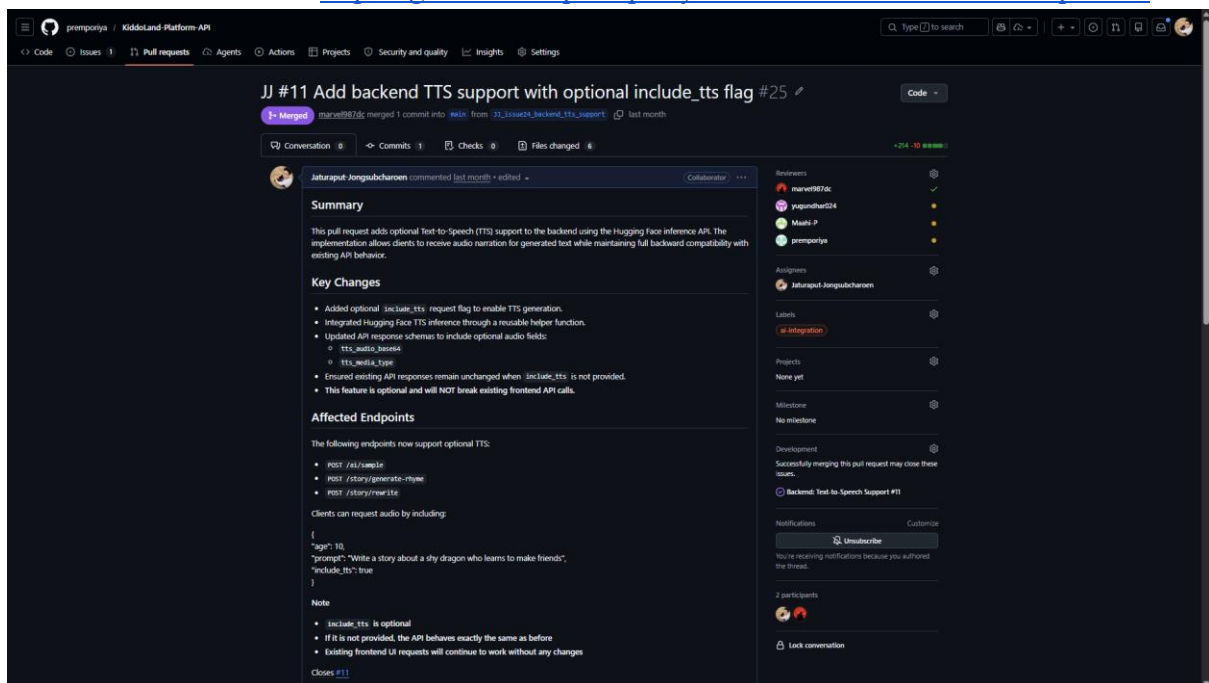

2.2.2.5. Add Generate Rhymes API (POST /story/generate-rhyme) #21

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-API/pull/22>

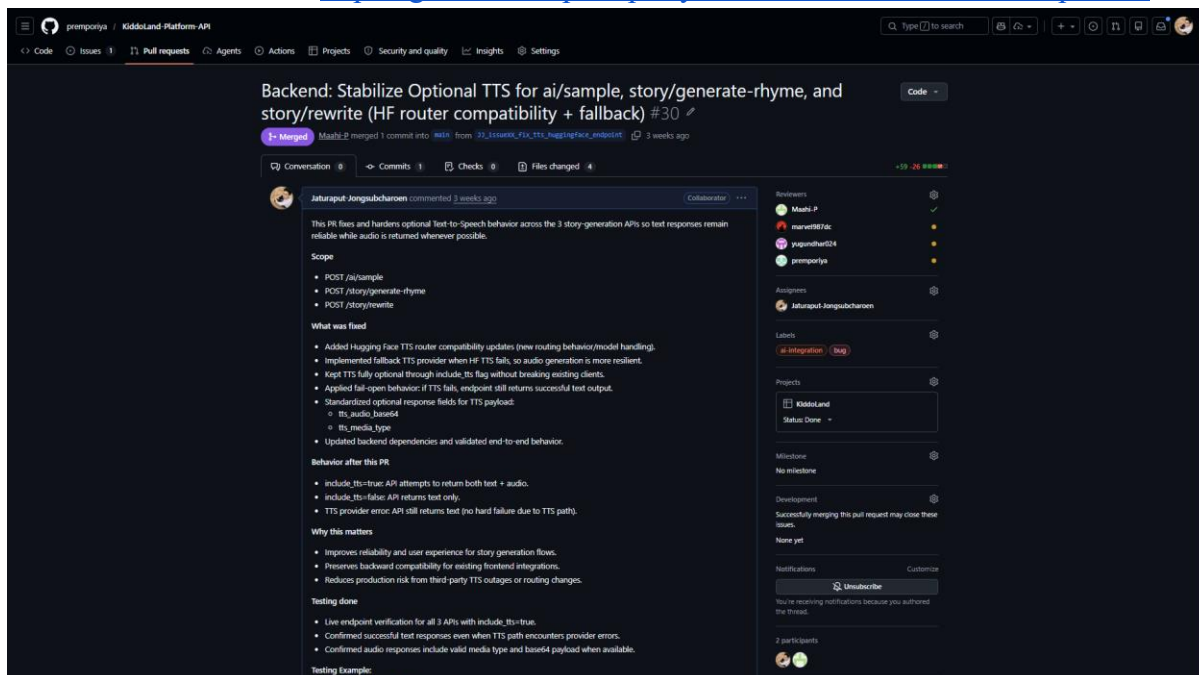

2.2.2.6. JJ #11 Add backend TTS support with optional include_tts flag

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-API/pull/25>

2.2.2.7. Backend: Stabilize Optional TTS for ai/sample, story/generate-rhyme, and story/rewrite (HF router compatibility + fallback)

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-API/pull/30>

3. Technical Contribution Description

3.1. Technical Contributions

Frontend

- Connected authentication forms to backend APIs
- Built reusable navigation components
- Improved UI usability with back button redesign
- Added Tiny TTS controls for story generation

Backend

- Built authentication with MongoDB and fallback users
- Integrated Hugging Face AI APIs
- Created rhyme generation API
- Added TTS support and optional response audio
- Added validation and robust error handling

Tools & Frameworks Used

- React / Frontend Framework
- FastAPI / Python
- MongoDB

- Hugging Face API
- GitHub

4. Testing & QA Contribution

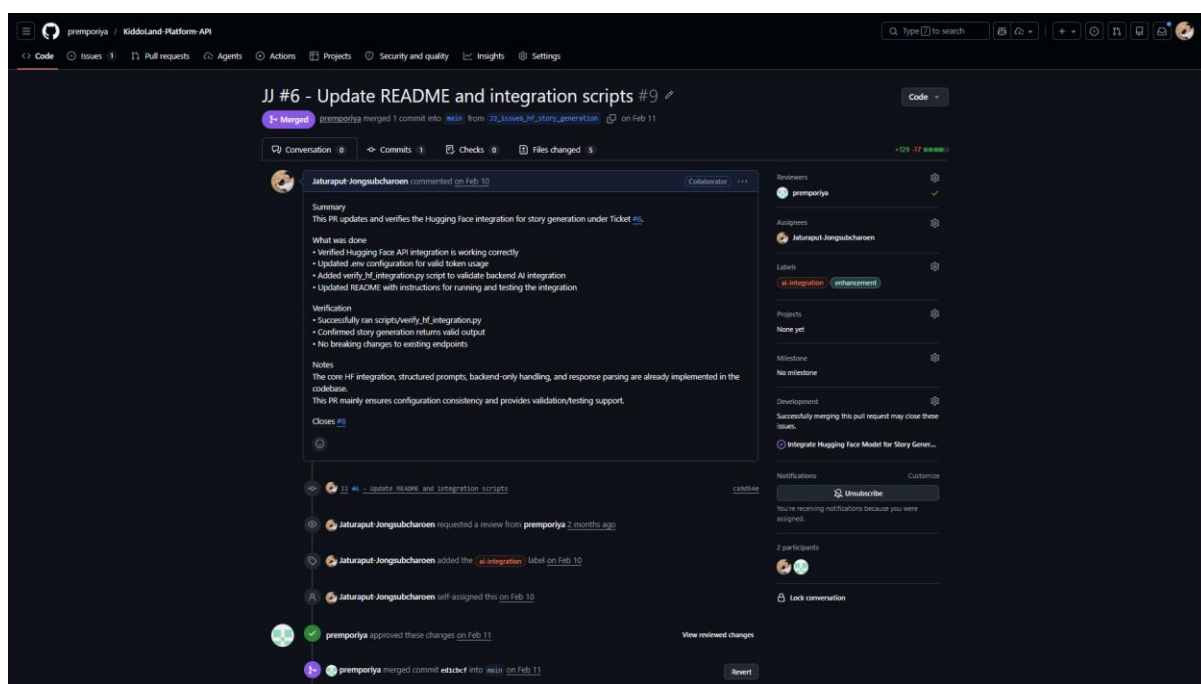

4.1. Testing & Quality Assurance Summary

I have worked on testing and quality assurance, which involved end-to-end functionality and API testing with Swagger, response checks, testing authentication flow, and confirming that AI functionality worked before launch.

4.2. Testing Evidence

4.2.1. Backend Integration Testing PR

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-API/pull/9>

```

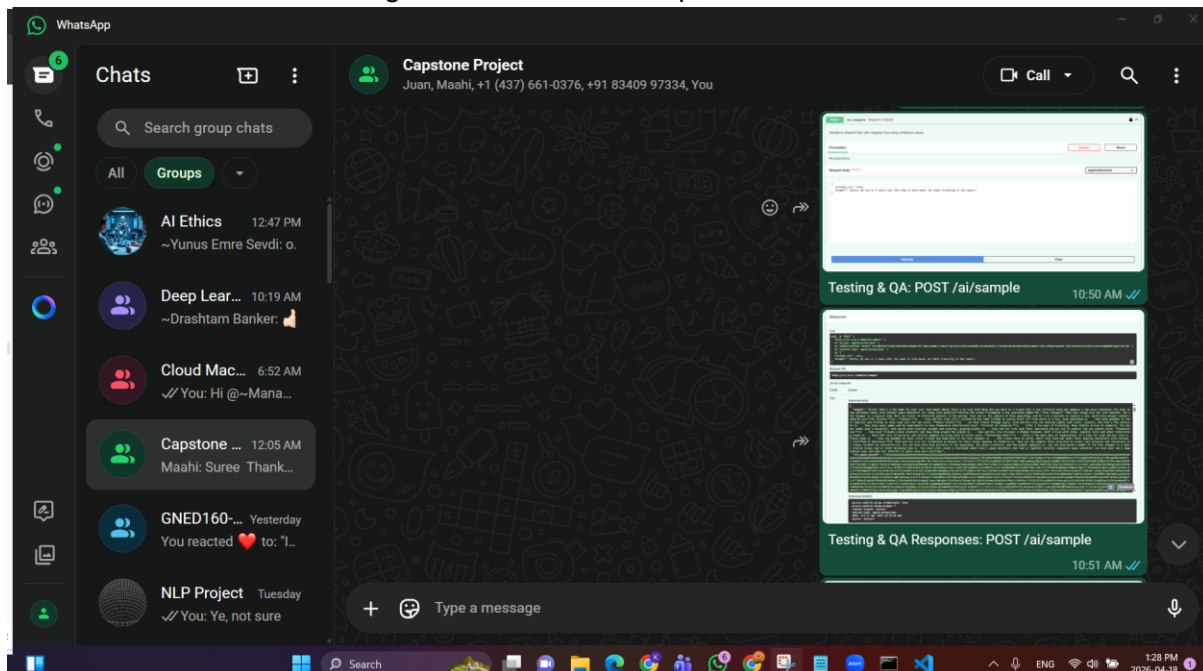

C:\Windows\System32\cmd.exe
(.venv) D:\mac\Centennial-College\Semester6-Spring2025-29Week\AI-Capstone-Project_Dr-Vinay-Vaithilingam(COP385001)\Group_Project\KiddoLand-Platform-API\python scripts\verify_hf_integration.py
Hugging Face integration OK.
Story length: 888 chars
['preview': "In a town where the sun always shines,\nLived a girl named Emma, so kind and fine.\nShe had a robot friend, not quite like the rest,\nA friendly robot who would play and do best.\n\nThis robot was blue, wi"]
(.venv) D:\mac\Centennial-College\Semester6-Spring2025-29Week\AI-Capstone-Project_Dr-Vinay-Vaithilingam(COP385001)\Group_Project\KiddoLand-Platform-API>

```

I confirmed the Hugging Face API. I included `verify_hf_integration.py` testing script. I ensured that generations of stories gave valid responses. I verified no violation of endpoints that existed. I enhanced the documentation of the test in README.

4.2.2. Local Swagger API Testing

4.2.2.1. Testing & QA: POST /ai/sample

4.2.2.2. Testing & QA: POST /story/generate-rhyme

The image shows a WhatsApp chat interface at the top and a REST client interface at the bottom.

WhatsApp Chat:

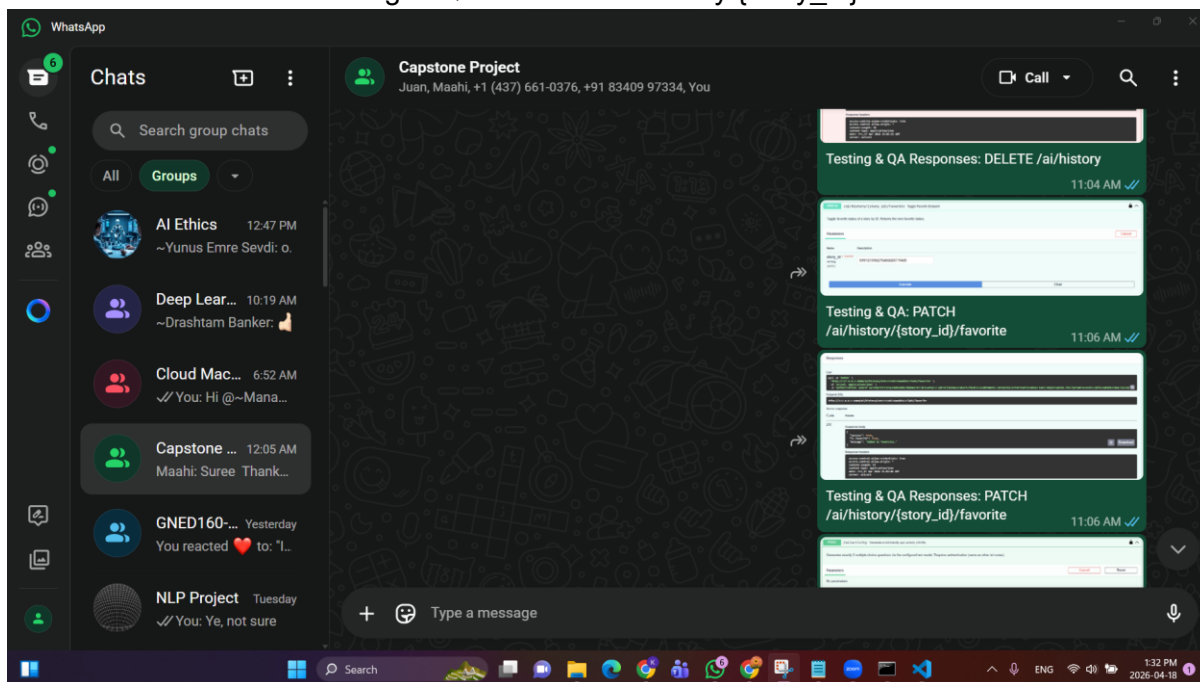

- Chats List:**
 - AI Ethics 12:47 PM ~Yunus Emre Sevd: o.
 - Deep Lear... 10:19 AM ~Drashtam Banker: 👍
 - Cloud Mac... 6:52 AM ✓ You: Hi @~Mana...
 - Capstone ... 12:05 AM Maahi: Suree Thank...
 - GNED160... Yesterday You reacted ❤️ to: "I..."
 - NLP Project Tuesday ✓ You: Ye, not sure
- Capstone Project Chat:**
 - Message 1: [Screenshot of a REST client showing a successful response for the POST /story/generate-rhyme endpoint.]
 - Message 2: Testing & QA: POST /story/generate-rhyme 10:52 AM ✓
 - Message 3: [Screenshot of a REST client showing the request body for the POST /story/generate-rhyme endpoint.]
 - Message 4: Testing & QA Responses: POST /story/generate-rhyme

REST Client Interface:

- Method:** POST
- URL:** /story/generate-rhyme
- Endpoint:** Generate Rhyme Endpoint
- Description:** Generate a short rhyme/nursery rhyme for a child. Reuses StoryGenerateRequest schema. Set `include_tts` to true to synthesize audio via `generate_tts_audio` (same TTS path as story generation); response then includes `tts_audio_base64` and `tts_media_type` when successful.
- Parameters:** No parameters
- Request body:** `{ "age": 6, "include_tts": true, "prompt": "write a story about a shy dragon who learns to make friends. My son's name is Rebron James." }`
- Buttons:** Execute, Clear

[illegible]

4.2.2.6. Testing & QA: PATCH /ai/history/{story_id}/favorite

PATCH /ai/history/{story_id}/favorite Toggle Favorite Endpoint

Toggle favorite status of a story by ID. Returns the new favorite status.

Parameters Cancel

Name	Description
story_id * required string (path)	69912159d276a6dd2671f4d5

Execute Clear

Responses

Curl

```

4.2.2.7. Testing & QA: POST /ai/activity

The screenshot displays a WhatsApp chat interface on a Windows desktop. The chat is titled 'Capstone Project' and includes participants Juan, Maahi, +1 (437) 661-0376, +91 83409 97334, and You. The chat history shows several messages, including a screenshot of a REST client interface for testing the POST /ai/activity endpoint. The REST client interface is titled 'POST /ai/activity' and has a description: 'Generate a kid-friendly quiz activity (JSON). Generates exactly 5 multiple-choice questions via the configured text model. Requires authentication (same as other /ai routes).' The 'Parameters' section is empty. The 'Request body' section is set to 'application/json' and contains the following JSON payload:

```
{  "age_band": "4-6",  "theme": "animals",  "learning_goal": "recognize common animals",  "difficulty": "easy"}
```

At the bottom of the REST client interface, there are buttons for 'Execute' and 'Clear'.

Responses

Curl

```
curl -X 'POST' \
  'http://127.0.0.1:8000/ai/activity' \
  -H 'accept: application/json' \
  -H 'authorization: Bearer eyJ2dkI0I1207g3WMS008kzjnyWdI2M1JnZeymqILCjybzd1joiuGfY2k50tiwBwKZSi6mhvhuILCjpyxQ10jE3WzYmZyYmRks1Mw4CC1GhTc3NjQ20TgxdX0.1koClqYumr56yoshnJJuk1NLkgb0kErSp42ZQ5Jpg' \
  -H 'Content-Type: application/json' \
  -d '{

5. Documentation & Reporting

5.1 Documentation Contributions

- Updated README files for project setup and usage
- New READMEs on how to set up and use project.
- Wrote pull request descriptions, describing features and changes.
- Added API usage notes of endpoints and testing.
- Written steps of Hugging Face integration.
- Added instructions to set up the environment (.env configuration)
- Assisted in putting together evidence on contributions to final report.
- Backed up proposal/report text with references and graphics.

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-API/pull/9>

6. Reflection (Critical Component)

I enhanced my technical knowledge on the frontend-backend integration, database management (MongoDB), API testing, debugging, and version control (GitHub). Teamwork and communication skills were also enhanced through the coordination of task and updating the team members on the progress and working with the teammates during the project.

I was taught on the frontend side how to interface the user interface to the backend APIs beginning with the authentication flow in terms of login, signup, token management, and protected requests. I also had a chance to learn how to combine POST APIs to such AI features as story generation and rhyme generation when user input is forwarded to the backend and AI output is rendered in the UI. I also had to deal with GET APIs to download and show the data saved like Story History, Favorites which were also very helpful references

to create the UI and structure the pages. Finally, I also got acquainted with how to add the optional Text-to-Speech (TTS) functionality, linking API calls to a button/icon, which will allow users to create and play audio only upon request.

At the back-end AI end, I got to know how to process text that is sent by the frontend, check the text and pre-process them and then send it to the model. This involved text cleaning and filtering based on regular expression, validation of required fields and formatting of user input into a prompt template. I also have learned about the impact of a timely design on the quality of AI responses, so I varied prompts to achieve more relevant and child-friendly output and to align the project objectives. Moreover, I have also been able to work with external AI APIs, deal with errors, validate responses, and provide fallback logic in cases where responses were not complete or failed.

Another key problem that I have had was managing AI API errors and unstable responses of third-party services and also making sure that the frontend is well integrated. I worked on this by including validation checks, responding, fallback and retesting to enhance reliability and user experience.

In case I would take this project in the future, I would prioritize on automated testing, higher scalability, safer, cleaner user interface, and other AI features to enhance the platform further.

7. Meeting Participation & Communication

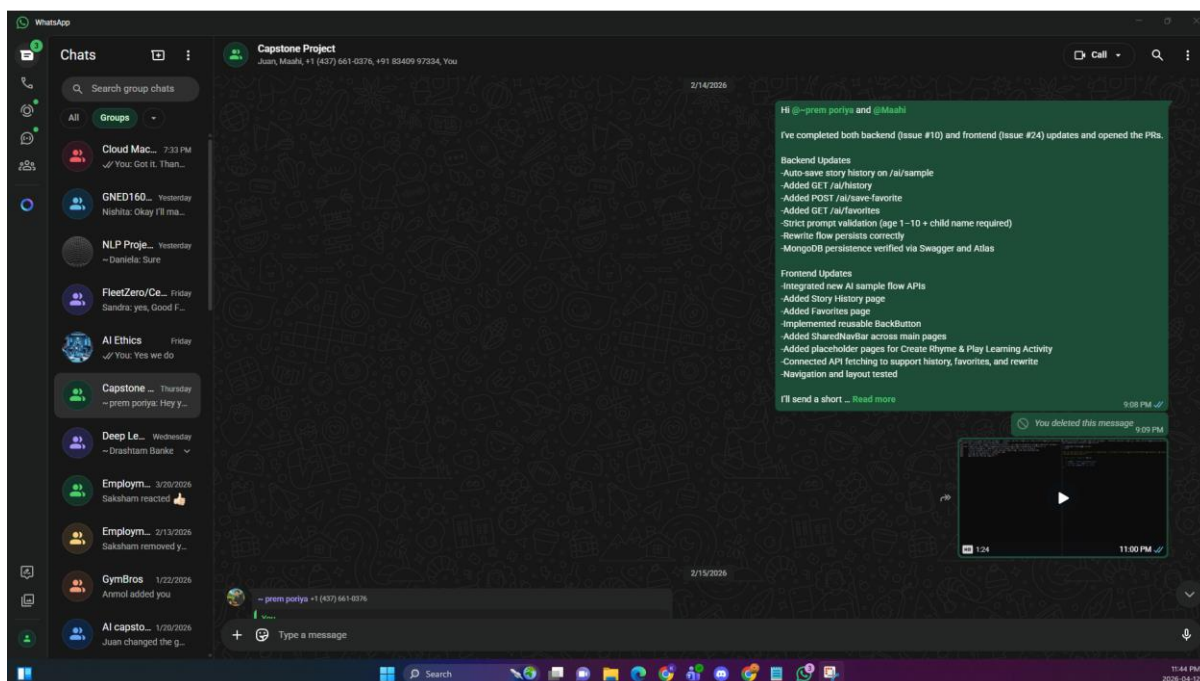

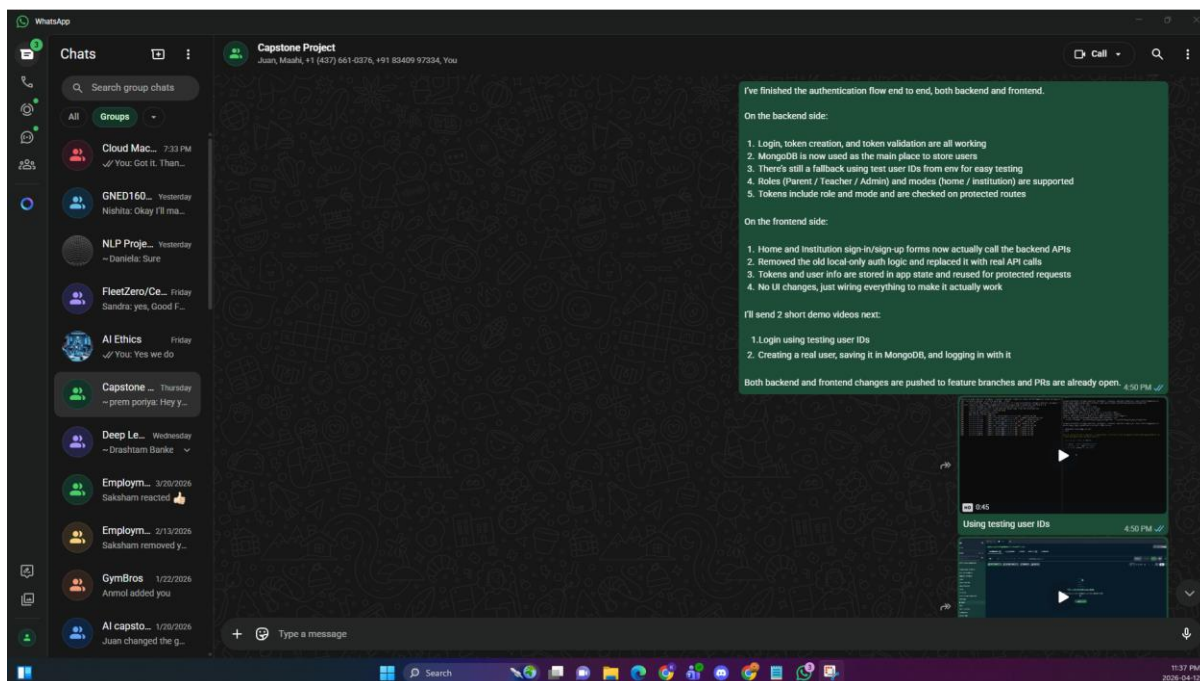

7.1. Teamwork & Communication Summary

I was engaged in communicating within the team in the KiddoLand project through group discussions in WhatsApp. I also provided regular updates on progress, collaborated on tasks, and talked about technical choices as well as assisting colleagues in planning and deploying projects.

- Teamwork & Communication
- Periodical progress reports with the team.
- Implemented flow of explained completed authentication.
- Requested teammates to review and organized and coordinated pull requests.
- Talked about feature ownership and task-assignments.
- Assisted with bug and backend troubleshooting by fellow team members.
- Team/professor testing shared deployment link and QR code.
- Added ideas toward future features (AI Story-to-Video Generator)
- Assist in bettering workflow diagrams and system planning.
- Backed up records and source of proposal/report work.
- Remained engaged in group conversations and answered group calls.

7.2. Screenshots Evidence for the Participation & Communication

7.2.1. Progress Updates Shared with Team

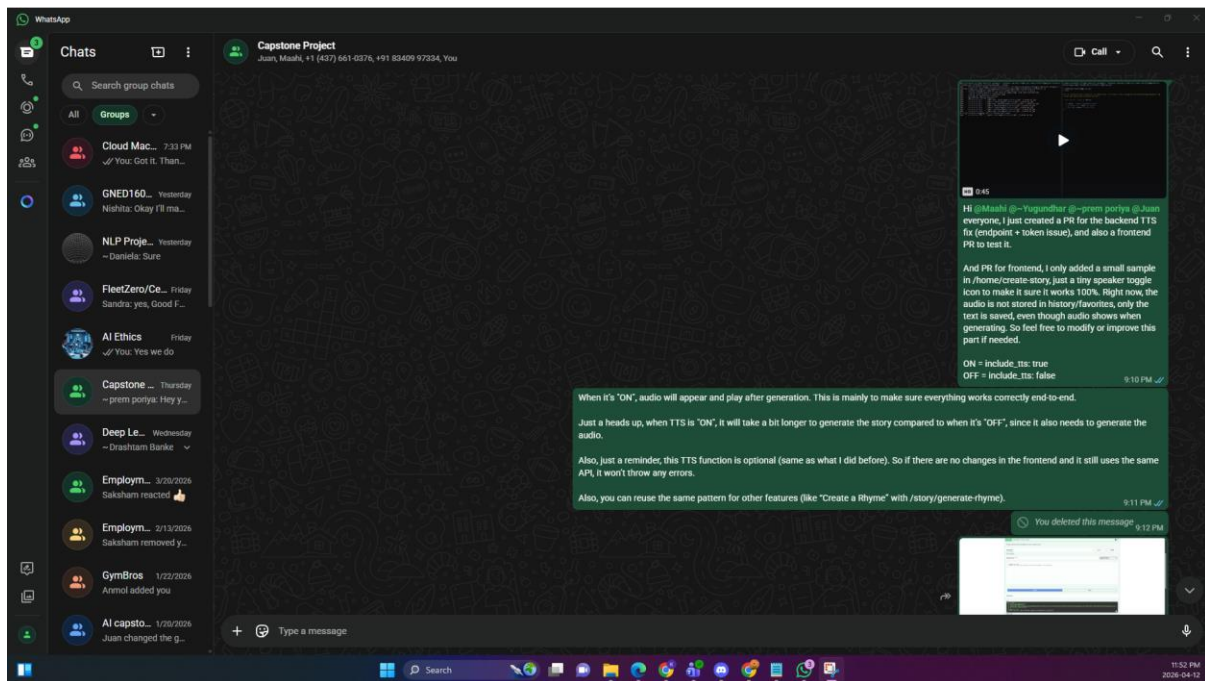

The image displays two screenshots of a WhatsApp chat interface for a group named "Capstone Project". The chat history shows a conversation between several members, including @premi, @Juan, @Maahi, and @Mac.

Top Screenshot:

- 3/4/2026:** @premi sends a message: "Hey @Mac, sorry to provide you ticket but kindly can you tell me what are you working for also can you tell me who is working for voice to voice and voice to text story?". @Mac responds: "Yes, Maahi asked me to work on implementing voice input on the frontend using browser speech recognition. The feature will record the user's voice, convert it to text in the browser, and then send the transcribed text to our same existing PUT chat API, so no backend changes are required for now. This task only involves UI updates. Please feel free to create the ticket for me. Thank you." (7:02 PM)
- 3/4/2026:** @premi sends a message: "Hey @Mac, I have assigned to one back end tickets for API and integration. Kindly just write it in details what ever you do or what you are above to do". (7:14 PM)
- 3/4/2026:** @Mac responds: "Thank you". (7:14 PM)
- 3/4/2026:** @premi sends a message: "I guess you can able to edit it so please update it tickets or let me know what you did in details I will edit for you". (7:15 PM)
- 3/4/2026:** @Mac responds: "And @all kindly let me know how is doing which work". (7:16 PM)
- 3/5/2026:** @premi sends a message: "Got it, I just opened a PR for issue #21 (Generate Rhymes API) and added both of you as reviewers. Either @premi or @Juan, please take a look when you have time. Thank you." (1:20 PM)
- 3/5/2026:** @premi sends a message: "Yeah sure I will review at night". (1:22 PM)
- 3/5/2026:** @Juan sends a message: "I already reviewed and approved Mac request". (1:23 PM)
- 3/5/2026:** @Maahi sends a message: "I did raise a PR for @premi and @Mac. Please have a look at that." (9:01 PM)
- 3/5/2026:** @premi sends a message: "I did raise a PR for @premi and @Mac. Please have a look at that." (9:01 PM)

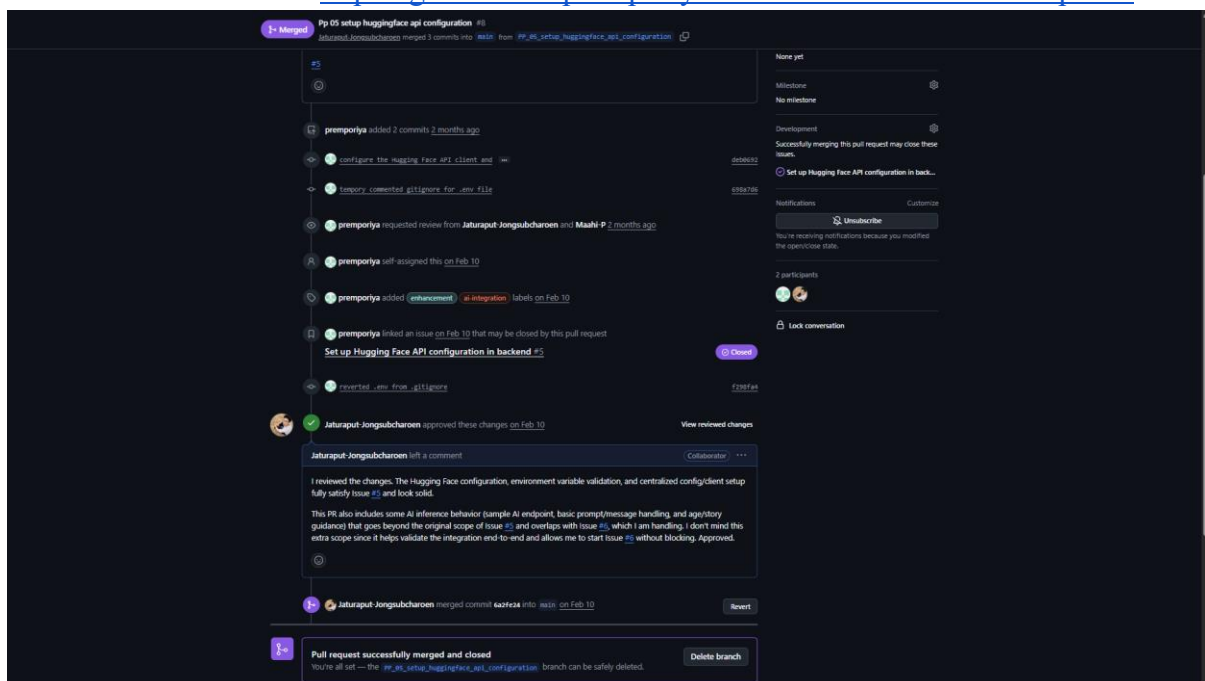

Bottom Screenshot:

- 3/4/2026:** @premi sends a message: "you can see them in the github". (11:05 AM)
- 3/4/2026:** @Juan sends a message: "you can see them in the github". (11:05 AM)

- 3/4/2026:** @premi sends a message: "Hey @Juan". (11:22 PM)
- 3/4/2026:** @premi sends a message: "Are you available at 12:00 let's connect if you are free?". (11:22 PM)
- 3/4/2026:** @premi sends a message: "Hi guys, I just pushed the backend Text-to-Speech support based on the issue Prem created and opened a PR. I implemented this optional feature in 3 APIs: /api/sample, /api/generate-rhyme, /api/rewrite". (5:25 AM)
- 3/4/2026:** @premi sends a message: "It's optional using include tts=true, so it won't break any existing frontend API calls. Now the backend can send audio back to the frontend when include tts=true is included. To use this feature, the frontend would need to add handling for the include tts parameter and play the returned audio. If include tts is not added, the API works the same as before since I made it optional so it won't break the frontend." (5:26 AM)
- 3/4/2026:** @premi sends a message: "I've added everyone as reviewers, so feel free to review and approve if anyone is available." (5:26 AM)

7.2.2. PR Coordination and Code Review Communication

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-API/pull/8>

Evidence Link: <https://github.com/premporiya/KiddoLand-Platform-UI/pull/35>

Files Modified

- src/app.jsx - Added future flags to Router configuration
- package.json - Added react-router-dom and remark-gfm dependencies

Related Issue

Closes #34 (if applicable - update with your actual issue number)

Comments

Just so you know, I came up with some additional processes on Wednesday. I built on Maahi's idea and shared the updates in the group chat that Prem created on Microsoft Teams.

I reviewed Maahi's idea for Children workflow and kept the original idea and direction the same. I just came up with a few additional processes that we can add to the flow.

1. Content Safety and Policy Filtering === so the stories stay safe and age appropriate for kids
2. Prompt Engineering and Knowledge Base === to help the AI understand what kind of story to write and keep the stories more organized
3. Made the Human Review step clearer === so parents can check and approve the story before it's finalized
4. Added a Model Improvement Loop === so the system can use feedback to make future stories more personalized and better quality

These additions don't change the project idea, they just add a bit more detail to the system flow. I've attached the updated flowchart to show how everything fits together. Feel free to let me know if you want to adjust or remove anything. I'm totally fine with that.

Do this is the project proposal I did. But I need to work on these things: AI capability description...

Okay

And also let us know whatever help you need from my end because I started understanding so whatever I can help you out feel free to tell me

Maahi

Hey guys is it possible for you to give me your content by this morning anything that you have thought about regarding the reference links that you sent me? I need some description for that. each member has to do 2 reference links.

We need to submit by today so if you can send me I can merge the work

Yagundhar +91 83409 97234

yes, so the significant part to mention which 2 references should be under whose name according to the document, above match the keywords and find the articles/journals so that we can say we paraphrased that articles info.

if you do so, will be easy while submitting in APA citation.

Maahi

Hey guys is it possible for you to give me your content by this morning anything that you have ...

Sure, I've just done my references. The links are different from the ones you guys have, and I included APA 7th citations for them.

@Maahi Check it out this file

Feel free to let me know whether the descriptions for each reference are enough

Hey @all this link are there if it could help?

3:25 PM

If you want me to get 4 references in a minute I can use AI, just so you know. If you want to do research like, reading through all of it, I think I need a bit time

3:25 PM ✓

Maahi

You

If you want me to get 4 references in a minute I can use AI, just so you know. If you want to do research like, reading through all of it, I think I need a bit time

Anything is fine for me if its relatable and according to our project then totally fine

3:27 PM
